

2025 年 8 月 16 日大陆雅思纸笔考试听力文本

Part 1

Part 1, you will hear a conversation between a man and a course administrator about a "Well-being" course. First you have some time to look at questions 1 to 5.

Now listen carefully and answer questions 1 to 5.

W: Good morning, thank you for calling the Well-Being Centre. My name is Sarah. How may I assist you today?

M: Oh, hello Sarah. I'm calling to enquire about the courses you offer. My wife and I are looking for something to help us stay active.

W: Sure, could you please tell me your name? I need to fill out the form.

M: Of course, my name's Murray. M-U-double R-A-Y.

W: Wonderful. I'd be happy to help you with that. Our yoga course is one of our most popular offerings. It has a comprehensive focus on general health and wellness.

M: That sounds excellent. Could you tell me what specific areas the yoga programme covers?

W: Certainly. While we cover many aspects of wellness, a particularly valuable component involves learning proper techniques to avoid any (1) **injuries**, especially those common in daily activities like gardening or household chores. It's quite comprehensive.

M: That's very useful indeed. When does it begin? I think my wife will be interested in taking part.

W: Let me check our schedule... We started a new session on Wednesday, but it's already Friday now, so it's obviously not suitable for you. However, the next available session starts on (2) **Tuesday**, the 6th of March. I think you can sign up for that.

M: Excellent, we can join that one. Actually, while I have you on the phone, my wife might be interested in something else as well. Do you offer anything about family relationships?

W: We certainly do. We have a wonderful communication skills programme running this month. It is designed to teach parents with practical skills to talk with their (3) **children** effectively, they are sometimes very naughty, many parents find it challenging to connect with them these days.

M: I think we really need that kind of skill. So, what's the teaching methodology like in that course?

W: It's highly interactive and engaging. To make the classes more practical, the teacher even perform as the (4) **actor**, demonstrating common family scenarios. Participants find this approach both entertaining and educational.

M: That sounds quite innovative. When does this communication course run?

W: It begins on Thursday, the 22nd of March. Let me check the timing for you... Since this is a night class, it will start a bit late. It was originally scheduled for 7:30 pm, but we've adjusted it to (5) **7.15 pm**.

M: The time is OK.

Before you hear the rest of the talk, you have some time to look at questions 6 to 10.

Now listen carefully and answer questions 6 to 10.

M: Now, regarding transportation, my wife doesn't drive, so she doesn't use a car. Are there good public transport options available to reach your centre?

W: Oh, absolutely. We're very well connected. There's a (6) **bus** stop right outside our building. The number 47 runs every fifteen minutes until late evening.

M: That's perfect. Could I please have your contact number for future reference?

W: Certainly. Our direct line is (7) **021-084-961-77**.

M: Thank you. Just one more question about bookings - what's your cancellation policy?

W: Well, we have a very reasonable policy. If you need to cancel your registration, you can obtain a full (8) **refund** without any extra charges before the 15th of March. After that date, different terms apply, but we can discuss those if needed.

M: That's good to know. By the way, do you have facilities available for participants, like a restaurant?

W: Well, we've a convenience store on the ground floor, and we also have a (9) **café** there, that opens until 8 pm. It serves coffee and healthy snacks, so participants can relax before or after classes.

M: Excellent. Actually, one final question about the yoga course - does it include any nutritional or dietary guidance?

W: It does include some basic guidance, yes. While we're not nutritionists, the main advice we emphasise is to take less (10) **sugar**. Many participants find this simple change makes a significant difference to their overall well-being.

M: That's all very helpful information, Sarah. Thank you so much for your assistance.

W: You're most welcome, Murray. Please don't hesitate to call again if you have any further questions. Have a wonderful day!

M: You too. Goodbye.

That's the end of Part 1. You now have half a minute to check your answers to Part1.

Part 2

Part 2, you will hear a tour guide giving information about a new holiday tour. First you have some time to look at questions 11 to 14.

Now listen carefully and answer questions 11 to 14.

Guide: Good afternoon, everyone, and thank you for coming to our travel information session. Today, I'm thrilled to present our brand-new 'Island Explorer' tour package. This is a seven-day adventure that takes in some of the most spectacular sights our region has to offer. Now, let's get into the details.

Now, the adventure begins as we depart from the city. We'll be travelling to our first base camp in either a spacious, modern bus or a fleet of comfortable minibuses – the final choice will depend on the size of our group. (11) Honestly, it's the longest single journey of the tour, we're looking at about four to five hours on the road, so I highly recommend bringing some entertainment for the journey.

However, even without air conditioning, (12) the windows are tinted, which does help to filter the intense sunshine. We rely on the natural breeze from the windows, which is usually lovely, but on a particularly still day, it can feel a bit warm.

We've also made some fantastic additions to this year's itinerary. (13) We are introducing a new activity - visit to a northern cliff. You'll see thousands of birds, their white wings creating an incredible spectacle against the blue sky.

In addition, you can buy some jewelry in the shops there, the diamond that mined in Africa are quite stunning. And we used to climb the mountain, but we're not doing that this time.

Also, based on feedback from last season's travellers - (14) many of you asked for more coastal activities, so we've added a fantastic morning at the coast where you can try snorkeling or just relax on the beach.

Before you hear the rest of the talk, you have some time to look at questions 15 to 20.

Now listen and answer questions 15 to 20.

Let's now take a more detailed look at the itinerary and the absolute highlight of each location we visit.

Our first stop is the charming town of Port Langford. The views across the bay are stunning, (15) but the real star is the food – fresh, local, and cooked to perfection. You could watch a cultural show elsewhere, but you come to Port Langford specifically for an unforgettable meal.

Next on our route is the headland known as Cape Vista. The name says it all – the vistas here are unparalleled. We'll arrive in the late afternoon when the golden light washes over the dramatic cliffs and sea stacks. (16) It creates a magical effect, making it the ideal location for taking pictures.

From the coast, we head inland to the Greenwater Forest. This is an ancient and protected rainforest, and we'll be taking a guided tour along its well-maintained trails. The air is fresh, and

the canopy is alive with sound. (17) If we're lucky – and we often are – we'll spot families of playful monkeys swinging through the trees above us.

Our next destination is the magnificent Suez Valley. This is our active day. We'll be dropped off at one end of the valley and picked up at the other. In between, it's just us and the trail. (18) The entire exploration is done on foot. It's a solid experience that gets the heart pumping, but the ever-changing scenery and the sense of accomplishment are more than worth the effort.

Later that day, we'll wind down with a visit to the picturesque Riverside Village. This is a fantastic opportunity to find that perfect souvenir. (19) The village is known for its community of artisans, and you can browse little shops selling beautiful handmade crafts, textiles, and pottery.

Finally, we culminate our journey at the awe-inspiring Old Caves. This is a site of immense historical significance, not a commercialised attraction. (20) As we walk through the caverns, you can see many stones, ancient paintings and sculptures. It's a humbling and fascinating experience, like stepping back in time. Thank you all for listening so attentively. I'll now hand you over to my colleague...

That's the end of Part 2. You now have half a minute to check your answers.

Part 3

Part 3, you will hear two teacher training students, Mark and Lisa, discussing their research project and teaching internship. First you have some time to look at questions 21 to 24.

Now listen carefully and answer questions 21 to 24.

Mark: Hi Lisa, have you had a chance to look at the feedback from Dr. Evans about our research project proposal?

Lisa: Yeah, I just got the email. It's clear, actually.

Mark: So, for the first part, do we need to write a formal summary and submit it? I was worried we'd have to get a detailed report done already.

Lisa: Well, the tutor said we don't need to write anything for this stage. (21) We just need to give a talk, about ten minutes and we can discuss our plan with the tutor.

Mark: Okay, great. That's a relief. Now, about that initial research... I found it tough going. How about you?

Lisa: It was awful at first. (22) I spent ages just reading these articles and case studies, and I felt like I wasn't getting anywhere.

Mark: Me too. I was completely lost for a while. It wasn't that the material was confusing, it was just time-consuming to process it all.

Lisa: Exactly. But we got there. And some of the findings were fascinating, weren't they? Like those statistics about the reason of entering teaching.

Mark: I know! I thought it would be more about family influence, you know, following in a parent's footsteps. (23) However, a considerable number of individuals viewed it as a pathway to employment overseas. That I hadn't expected.

Lisa: Neither did I. So, for our own research method, I think we should steer clear of surveys. Everyone does surveys. They can be a bit shallow.

Mark: Agreed. And group sessions would be far too time-consuming to organise.

Lisa: And questionnaires could work, but since they'd be online, we'd prefer to do our research in person.

Mark: Yeah, (24) I think we'll get much richer data if we carry out a series of in-person interviews. We can make recording and analyse the responses properly.

Lisa: Perfect. Let's go with that.

Before you hear the rest of the talk, you have some time to look at questions 25 to 30.

Now listen carefully and answer questions 25 to 30.

Lisa: Now, we also need to start drafting our reflections from the teaching practicum. What was the challenge for you?

Mark: Well, the biggest hurdle for me was applying university knowledge. You know, all those educational models and philosophies. (25) Actually, putting them into practical experience in a real classroom was much harder than I thought.

Lisa: Yeah. For me, in terms of getting help during lessons, I sometimes felt a bit stranded. (26)

The classroom teacher was supposed to be there to support me, but she was often busy marking at the back of the class and didn't really step in when I needed help.

Mark: Right, I had that once or twice, too. What about with the students themselves? Any major issues?

Lisa: Well, with my Year 8 class, when I was helping the pupils with reading, I was shocked by how low the reading age was for some of them. (27) Their literacy skill was a real challenge I wasn't fully prepared for.

Mark: I had a similar issue, but more with general conduct. When managing the behavior of students, my Year 10 class was a nightmare. Just getting them to stop talking was a battle every single day. (28) Disciplining the behaviour of those teenagers was exhausting.

Lisa: I can imagine. And outside the classroom? When planning the lessons, I found I was living in the library. (29) I need too much time to prepare for every single lesson, trying to make everything perfect.

Mark: Oh, tell me about it. And completing paperwork after lessons, it wasn't over. (30) There was all this paperwork – attendance, incident reports, feedback forms. There are too many forms that I need to fill.

Lisa: Well, it sounds like we have plenty to write about! Let's start structuring this report...

That's the end of Part 3. You now have half a minute to check your answers to Part3.

Part 4

Part 4, you will hear a lecture about the history of honey. First you have some time to look at questions 31 to 40.

Now listen carefully and answer questions 31 to 40.

Good morning. Today's lecture continues our series on food history, and we're focusing on one of the world's oldest natural sweeteners: honey. Our relationship with honey dates back thousands of years, long before the domestication of bees.

Some of the earliest evidence comes from ancient rock art. In Spain, for instance, a famous painting discovered on a (31)**cave** wall, depicts a human figure carefully gathering honey from a wild hive, surrounded by bees, thought to be over 8000 years old,

We also know that in ancient Egypt, honey was highly valued. Records indicate it was offered as a form of tax for the rulers at the (32)**temple** of Karnak.

The earliest method of collecting honey was, of course, from wild nests. Hunters would use smoke to calm the bees—a technique still used today. The honey was then collected by hand. One common tool mentioned in various historical accounts was a simple, upturned (33)**basket** used to carry the precious honeycomb away.

The uses of honey in the ancient world were remarkably diverse. Primarily, it was the main sweetener for food and drink. But its antibacterial properties made it incredibly useful for preserving food; it could protect meat and fruit from spoiling, even in the extreme (34)**weather**. Absolutely, its role in health and wellness is profound and backed by both ancient tradition and modern science. Such as its potential in combating antibiotic-resistant bacteria and supporting gut health. It was often used in the ancient (35)**medicine**, applied to wounds to prevent infection and consumed to soothe throat ailments.

Its role extended beyond the practical. The Egyptians, for example, used it in their embalming rituals. It was often combined with (36)**mud** and other materials to help preserve the bodies of the elite. In other cultures, its value was spiritual.

For the ancient Greeks, honey was considered a divine substance, a sacred gift for the (37)**gods**, and was often left as an offering at altars.

Beyond its health applications, honey is a cornerstone ingredient in cooking traditions worldwide, valued not just for its sweetness but for its unique functional properties and complex flavor. We can look at ancient recipes. A surviving Roman cookbook describes a dish where (38)**vegetables** are slow-cooked with honey, salt, garlic and cheese, creating a sweet and savory side dish.

The move from hunting honey to beekeeping was a significant development. The first apiaries used simple hives made from pottery or hollowed-out logs. The tools were basic; a vital early tool for a beekeeper was a knife, not made of metal or wood, but often from (39)**bone**, for cutting the honeycomb from the hive without damaging it.

Finally, beyond food and medicine, honey had a use in ancient cosmetics. It was highly valued for its moisturizing and antibacterial properties, often being blended with oils and clays to create nourishing face masks to moisturize and soften the (40)**skin**. So, as we can see, the history of honey is deeply woven into human culture in a multitude of ways. Honey has maintained its status as a truly golden treasure. Its story is not just about food, but about human ingenuity and our enduring relationship with nature...

That's the end of Part4. You now have half a minute to check your answers to Part4.
