

2025 年 8 月 23 日大陆雅思纸笔考试听力文本

Part 1

Part 1, you will hear a man and a woman talking about the arrangement of a marketing conference. First you have some time to look at questions 1 to 5.

Now listen carefully and answer questions 1 to 5.

Man: Good morning, Sarah. Do you have a quick moment? I'd like to go over the final arrangements for the marketing conference next week – just to make sure we haven't missed anything crucial.

Woman: Of course, David. I've actually got my checklist right here on my desk. I was just reviewing it myself. What would you like to confirm first?

Man: Excellent. Let's start with the basics. Which conference room did we manage to secure in the end? I know a few were already booked.

Woman: We were lucky. We've got Conference Room (1) **429**.

Man: Okay, that's perfect.

Woman: Yes, it was the only one available that could comfortably fit everyone.

Man: No problem, and what's the earliest we can get in to set up on the day?

Woman: Well, our conference room usually opens at 10 a.m. But sometimes the guests may request earlier.

Man: Yes, would it be possible for us to get access an hour and a half earlier?

Woman: That would be fine. So, (2) **8:30** a.m., right?

Man: Good. And do you have the equipment that would be suitable for the main presentation?

Woman: Yes, we have excellent facilities specifically designed for business meetings.

Man: That would be perfect. We do need the facility that can connect to the main projector.

Woman: No problem, I'll make certain that every speaker's table has a (3) **laptop**, you can use that for free.

Man: Brilliant. And remember, we'll be taking questions from remote staff via the internal system, so could you double-check that the (4) **phone** in the room is fully functional?

Woman: Yes, I'll test that tomorrow.

Man: By the way, how's the air conditioning in there?

Woman: Well, the air conditioning in that wing can be a bit temperamental, so I'll ask the Premises Department to provide a standing (5) **fan**, just in case it gets stuffy.

Man: Excellent.

Before you hear the rest of the talk, you have some time to look at questions 6 to 10.

Now listen and answer questions 6 to 10.

Man: Now, for the catering. What kind of food will you provide on the first day?

Woman: As soon as they arrive, we'll have plenty of hot drinks, like tea and coffee, and to go with that, fresh (6) **fruit** of course.

Man: Lovely. Moving on to other logistics... I need to make sure the final timetables reach everyone well in advance. When is the absolute latest we can send them out?

Woman: Well, the attendees will need them for preparation, so they must be received by Tuesday. That means we should send them out by next (7) **Thursday** to ensure they arrive in time.

Man: I agree. And regarding the name badges – where is the most suitable place to leave them for people to collect on their way in?

Woman: I think the most efficient place is at (8) **reception**. We can have a staff member there to hand them out directly.

Man: Fine. And about the feedback forms – we want these to be quick and effective. So how many questions we should include?

Woman: I'd strongly suggest no more than (9) **six**. Any more than that and we might see a drop in the completion rate. We want it to be brief.

Man: OK, one last question, where can the guests park their cars? I know many of them will be driving themselves.

Woman: Yes, that's all been taken care of. I've reserved the (10) **parking**, right in the open area in front of the building where our meeting room is located.

Man: Wonderful. That's a huge weight off my mind. Thanks so much for your help, Sarah. It sounds like everything is under control.

Woman: You're welcome.

That's the end of Part 1. You now have half a minute to check your answers to Part1.

Part 2

Part 2, you will hear a young woman talking about an island tour. First you have some time to look at questions 11 to 14.

Now listen carefully and answer questions 11 to 14.

Good morning everyone, and thank you for coming along to this travel. My name is Sally, and I recently returned from a wonderful week-long guided tour of Silverstone Island. I know many of you are considering visiting, so I thought I'd share my experiences and some practical advice to help you plan your trip.

Now, you might wonder why many people visited the island, while there certainly is interesting history to explore if you look for it, and some wonderful wildlife spotting opportunities, but neither of those are the main draw. (11) The majority said they wanted to escape their busy routines since the island has a peaceful atmosphere.

I know everyone is really looking forward to the visit, and many people have been asking what they need to bring. First of all, comfortable shoes are essential for walking, we have very beautiful coastline that you can walk along with, (12) but you know the island has a changeable coastal climate, so I strongly recommend you bring a raincoat. Also, sunscreen is necessary for the surprisingly strong sun.

This tour will be an exceptionally memorable experience. We will visit the Mount Burgess, which isn't actually a mountain but rather a protected wildlife sanctuary. This is where you can see several species of endangered animals, like the Silverstone parrot and tortoises. (13) But if I had to pick the most impressive one, it would definitely be the sundown. Each evening presented a more spectacular display than the last, with the sky turning incredible shades of orange, pink and purple over the ocean. We also enjoyed wonderful seafood barbecues on the beach, where they served grilled fish and coconut rice cooked in bamboo tubes.

I really enjoyed this trip to the island. The weather was mostly as expected – plenty of fine days with occasional rain, but it always cleared up quickly. The cost was quite reasonable too, just normal travel expenses. (14) But if you ask me about one unexpected thing when visiting this island – it was the wonderful friends I met during my stay. I hadn't expected to connect with so many like-minded travellers, but we formed such a wonderful group that we've kept in touch since returning home.

Before you hear the rest of the talk, you have some time to look at questions 15 to 20.

Now listen carefully and answer questions 15 to 20.

Now, let me tell you about some of the specific places we visited and what makes each one special. We stopped at six main locations during our tour, each with its own unique attraction. (15) First on our itinerary was Hartford, a charming little village that's famous for its wonderful souvenirs. The main street is lined with delightful little shops selling beautiful handmade crafts, local artwork, and unique souvenirs. I spent a small fortune there myself!

Next, we traveled to Tredinton, which is situated high in the hills. (16) While the journey up is quite steep, you're rewarded with the most magnificent views across the entire island. On a clear day, you can see all the way to the mainland from the viewpoint there. Absolutely worth the climb! Our third stop was Hayling, a vibrant seaside town that has become famous for its spectacular urban art. (17) Local and international artists have transformed the buildings with colorful murals and innovative installations. Every corner reveals another artistic surprise - it's like walking through an open-air gallery.

We then visited Mount Burgess, which isn't actually a mountain but rather a protected wildlife sanctuary. (18) This is where you can see several species of extinct animals, including the rare Silverstone parrot that exists nowhere else in the world. The conservation work they're doing there is impressive.

After that, we stopped at Langley. (19) There are beautiful coastal paths that wind through dramatic rock formations and peaceful woodland trails. Perfect for those who enjoy gentle hiking and connecting with nature.

(20) Finally, we ended our tour at Port Steven, a port town that's home to a historic prison dating back to the 18th century. You can take a guided tour through the well-preserved cells and learn about the island's fascinating maritime history.

The combination of natural beauty, interesting attractions, and friendly locals made it a truly memorable experience. I'd be happy to answer any questions you might have about my trip.

That's the end of Part 2. You now have half a minute to check your answers to Part2.

Part 3

Part 3, you will hear two university students, Roger and Michelle, discussing about family farm. First you have some time to look at questions 21 to 25.

Now listen carefully and answer questions 21 to 25.

Roger: Hey Michelle. So, are you all set for the agriculture presentation tomorrow? I feel like we've been buried in your grandfather's farm records for weeks!

Michelle: Honestly, I think we're as ready as we'll ever be.

Roger: Yeah, I think so. Going through all those materials was quite a journey, wasn't it? When we first started, I wasn't sure what to expect. So, what's the most interesting part for you? I think the method was important

Michelle: Yeah, I agree, but for me, the most interesting aspect wasn't the method, or the specific geographical area. (21) When I first got this assignment, I thought researching my grandfather's farm would be a bit dull, but it's been super fun actually. The way his personal writings showed his feelings about the changes in farming was just fascinating.

Roger: Yeah, having all those documents was a huge help.

Michelle: Absolutely.

Roger: He offered to help translate some of the older terms, but we managed that ourselves.

Michelle: Yes, he didn't just tell us stories, (22) he let us use all the first-hand documents, so we can access to the primary source. He went up into the attic and brought down all these boxes.

Roger: That's true. We're so lucky your grandfather was so supportive. And although finding other sources was tricky. Remember that library automated system? It was modern enough, but completely useless for us.

Michelle: Oh, I know! It had a very detailed index and the technology was fine, (23) but the material it had was not relate to our research. Everything was about national trends or huge agribusinesses, nothing about small, independent farms in our region.

Roger: Yeah, I agree. So, what made your grandfather's farm so special? You know, most small farms were being bought up and consolidated into those large businesses in the mid-century.

Michelle: Right. He wasn't an early adopter of new methods, not really. He managed to keep it going as a family concern when nearly everyone else around him was selling up. (24) I guess what sets him apart is that he carried on the family legacy.

Roger: Yeah, it seemed that it was his life's work to preserve that. So, what do you think was the most valuable part of the project?

Michelle: I was particularly fascinated by the decisions and long-term strategies that allowed family farms to survive, like the mid-century shift towards industrial agriculture. (25) My focus was always on how a family farm developed over time. It was this very personal, ground-level perspective on broader historical trends that I found so compelling.

Roger: True.

Before you hear the rest of the talk, you have some time to look at questions 25 to 30.

Now listen carefully and answer questions 26 to 30.

Roger: Alright, let's take a look. It seems these documents are all quite old.

Michelle: Yes, starting with the diary...His handwriting was a real challenge.

Roger: Yeah, he wrote the diary just for himself, (26) so his handwriting is really messy and difficult to make out.

Michelle: What about the photos? I thought they'd be so helpful.

Roger: They were, in a way, but also frustrating. There were lots of group shots of farm workers, but they were taken from so far away. (27) The images were too ambiguous to determine people.

Michelle: Yeah, you couldn't really tell what you were looking at in most of them. And then the letters he wrote to his sister. The ones we had were so colourful and full of great details about daily life.

Roger: But that's just it—we only had some of them. (28) He wrote for years, but many were lost, the letters are fragments and many gaps due to losses.

Michelle: And the letters to his business contacts, they were just thrown in a box. (29) So, they were all mixed up and not in any kind of order. We might spent ages just trying to put them in the right sequence.

Roger: And finally, the farm's financial records. Incredibly detailed, which is great, (30) but full of outdated terms and jargon, so there were many unfamiliar words. It was like learning a new language! At least they weren't just endless numbers.

Michelle: Right! It was all worth it in the end, though. The personal stories we found really brought it all to life...

That's the end of Part 3. You now have half a minute to check your answers to Part3.

Part 4

Part 4, you will hear a lecture on mathematics education in the United States. First you have some time to look at questions 31 to 40.

Now listen carefully and answer questions 31 to 40.

Good morning, everyone. It's a pleasure to see you all here for our final session. Today, we're going to spend time delving into a new program in the United States, about Better Approach to the teaching of Mathematics. The aim is to foster a generation of graduates who are not just proficient calculators, but truly numerically literate citizens, capable of critical thinking and informed decision-making.

To illustrate this approach, let's begin by examining a concrete real-world application example that forms part of the freshman curriculum. Students might be presented with a detailed scenario involving home renovation. They aren't simply given a room's length and width and told to find the area; instead, they are provided with a complex floor plan. Through this immersive project, they are taught to determine the full expense of a (31) **carpet** in a specific room, transforming a simple geometric formula into a valuable life skill.

This kind of practical exercise feeds directly into the broader and crucial skill of analysis of numerical information, which is a thread that runs throughout the entire curriculum. We live in a world filled with data, presented in news media, advertising, and social platforms. The main aim of this program is to enable students to understand (32) **graphs** better, which is an essential skill for all informed members of society.

Furthermore, the curriculum dedicates significant time to developing essential life skills that are often overlooked in traditional math education. A core component of this is a comprehensive and multi-week module focused entirely on personal finance. For example, students learn how to (33) **budget** their finances. They work with sample salaries, manage mock debt like student loans and credit cards, allocate funds for rent, utilities, groceries, and discretionary spending, and plan for long-term goals like saving for a vacation or a down payment on a car.

One crucial ability is figuring out an (34) **estimate** cost ahead of a project. This skill teaches them to gauge a reasonable ballpark figure, which helps in initial planning, prevents severe miscalculations, and allows them to quickly identify if a final calculation is wildly inaccurate.

Building upon these foundational skills, the next module provides a detailed example of data concepts put into practice. In our modern, information-rich world, the ability to critically evaluate data is arguably more important than ever. The lesson helps students study the implications of working with a limited (35) **sample**.

Following this, they are encouraged to become critical consumers of all the information they see. They learn to identify if the (36) **sources** of data are reliable and suitable.

Finally, the course culminates with an example of data presentation, emphasizing that it's not enough to simply analyze data; one must be able to communicate findings clearly, accurately, and persuasively to others.

For a case study, they might spend a week deeply analyzing various data on (37) **household** use, examining evolving patterns, time allocation across different demographics, and the societal implications of these digital habits.

Students learn that different types of data demand different visual approaches, and they must know how to select a suitable (38) **chart** - that most effectively represents their data.

For example, in an extensive demographics project, they might be tasked with tracking the complex changes in (39) **birth** rates in countries over a century, analyzing the correlation with social and economic events.

However, the module also stresses that visual tools are not always the best solution. When the absolute priority is to display a very large set of precise numbers for direct comparison and minimal interpretation, the students learn that this data is often best illustrated in a (40) **table**. This format prioritizes accuracy and simplicity, allowing the raw data to speak for itself without any risk of visual misrepresentation...

That's the end of Part 4. You now have half a minute to check your answers to Part4.
