

2025 年 8 月 30 日大陆雅思纸笔考试听力文本

Part 1

Part 1, you will hear a man talking to a house agent about renting a property. First you have some time to look at questions 1 to 5.

Now listen carefully and answer questions 1 to 5.

Letting Agent (LA): Good afternoon, thank you for calling Hampworth Sea Lettings. My name is Sarah. How can I assist you today?

Man (M): Hi Sarah. Yes, I'm calling about your listings online. I'm looking to rent a house or a spacious flat in the Hampworth Sea area.

LA: Wonderful, we've got a few properties that might suit you. Well, a popular choice for commuters is a flat we have available on Queen Avenue. This apartment has two bedrooms. It's not very spacious, but it comes fully furnished.

M: Is there a park around here?

LA: Well, there isn't a park in the surrounding area, but it's very close to the (1) **station**, only about two minutes away. It's very beneficial for working in the city center.

M: That's handy. But I don't need this now because I work from home.

LA: Well, but some tenants have mentioned that there were some noises because of the (2) **traffic**, especially during the rush hour. In addition, it's a very (3) **modern** building, which some people like for the clean look. However, to be honest, that also means it lacks the charm and character of the older properties in the area, and the walls can be a bit thin.

M: I see. I'll have to think about that. What about houses?

LA: Of course. Actually, we do have a terraced house coming up on **Sherfield** Road.

M: Sorry, could you spell that for me?

LA: It's (4) **S-H-E-R-F-I-E-L-D** Road. This apartment has three bedrooms, which is perfect for sharing with friends, and it even has a balcony. Also, the owner is particularly keen to find a long-term, reliable tenant, so they've specified that it's available for (5) **2 years**, which is perfect if you want to settle and not move again soon. But there's one problem: they don't allow pets.

M: That's fine by me, I don't have a pet myself.

Before you hear the rest of the talk, you have some time to look at questions 6 to 10.

Now listen and answer questions 6 to 10.

LA: Another property is on Oaktree Road. This apartment has two bedrooms, so it's a bit smaller, but it features a very cozy kitchen, which would be perfect if you enjoy cooking. The biggest advantage is that it has a large (6) **garden** at the back, which is fully enclosed and very private.

M: That sounds really ideal, actually. I do like gardening.

LA: There is one drawback, however, which I should mention. The tenancy is unfortunately limited. The owner is being sent to work in the US for (7) **10 months**, so it's only available for that period, I'm afraid. It's not a long-term contract.

M: Oh, that's a pity. I was hoping for at least a year.

LA: I understand. Well, I can check with the landlord for you. And the last one you might consider is an apartment in The Belvedere. It's a new, luxury development.

M: What does it offer? I think I've seen the building.

LA: The apartments are all three-bedroom, and a standard feature is your own secure, it has the underground (8) **parking** space.

M: Yes, that would be suitable for me.

LA: Yes, and in terms of the advantages, you can see the entire (9) **lake** from the living room balcony, the views from the upper floors are truly spectacular. In addition, there's also a (10) **gym** on the ground floor, which is included in the service charge.

M: Great.

LA: The only real disadvantage, as you might expect, is that the rent is high compared to the other properties we've discussed.

M: I guess that might be way beyond my budget but thank you for all the information. You've been very helpful.

LA: No problem. Have a think about it and let us know what you decide.

M: Sure. Goodbye

LA: Goodbye.

That's the end of Part 1. You now have half a minute to check your answers to Part1.

Part 2

Part 2, you will hear a woman talking about the Summerlight festival. First you have some time to look at questions 11 to 14.

Now listen carefully and answer questions 11 to 14.

Liz: Good morning everyone, and thank you all for coming to this brief talk. My name's Liz, and I'm one of the founding organizers of the '**Summerlight festival**' which takes place right here in the city centre.

It's hard to believe, but we're celebrating our eighth year this summer. It certainly doesn't feel that long! Many people might be curious about what led me to start this festival. (11) Actually, the idea for creating the event came from a friend of mine from Germany. I was so inspired that we decided to try and create our own version here. As you know, our main location is the old Grand Pavilion. If that building looks familiar to some of you, (12) because it used to be a cinema. Its history gives the festival a really unique atmosphere.

Of course, I know many of you are wondering about volunteer opportunities, so let me cover that next. We are grateful that so many people want to get involved. We literally get hundreds of applications every year. (13) We're looking for more people to join our roaming entertainment squad. That involves things like walking around on stilts, being a clown, doing magic tricks. We already have excellent staff answering questions, and some other positions are also full. There are also no current vacancies for ticket attendants or security staff. However, we do still have some openings. (14) In addition, we are lacking volunteers to help with the practical side of things, specifically building the stages for our various performance areas. It's a big job!

OK, I'll talk about the specific arrangements for this event later.

Before you hear the rest of the talk, you have some time to look at questions 16 to 20.

Now listen and answer questions 16 to 20.

Alright, now let me quickly run through some of the key attractions you can expect to see this year and any special booking information.

First up is the Character Parade. This is always a massive favourite with the younger children. It features all their favourite storybook characters. (15) It's so popular that our advice is to reserve seats in advance, as it always sells out.

Next, for those of you who want a more hands-on experience, we have the Circus Workshop. This isn't just a demonstration; you can learn how to juggle and balance feathers yourself. (16) We have engaged a skillful worker for the event, so it's a fantastic opportunity.

Another attraction you won't want to miss is the Bubble Show. It's a truly wonderful display of giant bubbles and light effects. (17) This is new for this year; we've never had anything like it before, so we're very excited about it.

Then we have a quieter space called the Reflection Room. It's a calming area where children can leave a video message about their day. (18) It's quite a special thing, and we offer a recording of the session for children to take home as a souvenir.

Right before you enter the main carnival grounds, you'll come across the Adventure Playground. (19) This is designed so that every child will encounter this before entering the main gate. It's a fun obstacle course that gets everyone into the playful spirit right from the start.

And finally, for our younger visitors, we have the Children's Theatre. (20) The performances are quite long, usually running for a couple of hours. We know that's a long time, so we give the children cheese to help keep their energy levels up.

And I think that covers everything for now. Thank you for your time. Are there any questions?

That's the end of Part 2. You now have half a minute to check your answers to Part2.

Part 3

Part 3, you will hear a student and a professor discussing the research on the new city bike station. First you have some time to look at questions 21 to 26.

Now listen carefully and answer questions 21 to 26.

Professor: Okay, Nancy, come in. So, you wanted to discuss your research project on the new city bike station.

Student: Yes professor. I've compiled most of my initial data and I'm starting to write up the analysis.

Professor: Good. Let's start with the context. What would you say were the primary aims for establishing this centre?

Student: Well, the most important purpose, according to the founders, (21) was to support people who already have the bicycles to travel to work easier. Things like providing secure parking and maintenance facilities.

Professor: I see.

Student: And, riding a bike instead of driving really helps cut down on traffic jams and air pollution. But they're probably side effects, my reading of the project proposal suggests they weren't the targets.

Professor: OK, what about others?

Student: Well, the publicity material highlights a few. (22) Obviously, there's the key goal of encouraging healthier way of life by getting people to be more active.

Professor: Right, promoting public awareness is important.

Student: Exactly.

Professor: Now, onto your findings. What are the reasons for discouraging people from using bikes to travel?

Student: People often worry about commute by cycling. (23) For example, If a bike was left in a public place, it may be at risk of theft.

Professor: Absolutely, that's really an issue. Anything else? Would they be worried about road safety?

Student: Interestingly, it's not so much about the road safety, but more practical issues. For instance, (24) many potential cyclists said their employers don't provide any facilities, like lockers or showers.

Professor: Yes, although the cost of bicycles is relatively economical, many people still don't choose this mode of transportation.

Student: Yes, that's true.

Professor: So, your study focuses on the users of this bike centre. What aspects are you looking at?

Student: (25) Firstly, I focus on what kind of people using the centre. You know, are they hardcore daily commuters, or occasional users? Understanding the profile is the key.

Professor: Okay. So, would you pay attention to their employment situation and conduct a more detailed analysis?

Student: Not yet, beyond that, (26) I concentrate on exploring the potential long-term influence of the centre. Does this facility change people's behaviour over time? Do they cycle more frequently?

That's the key question for the future of the transport system.

Professor: A very good approach. We may discuss some improvements later.

Before you hear the rest of the talk, you have some time to look at questions 27 to 30.

Now listen and answer questions 27 to 30.

Professor: Your research is very meaningful. It can be included in the report. So, what research methodology are you focusing on?

Student: (27) I was mainly concentrating on designing a detailed questionnaire. I got over 200 responses, which gave me a lot of quantitative data to work with.

Professor: And will you be following that up with any qualitative methods? Face-to-face Interviews, for example?

Student: I did consider it, but I feel the data is already quite comprehensive. I don't think interviews are necessary for this stage of the project.

Professor: Fair enough. So, from this data, what did users indicate they were most concerned about?

Student: Well, a small minority mentioned things like needing better access to repair shops. (28) People want safe storage areas not just for their bikes, but for their important things – laptops, bags, and even their helmets while they're at work.

Professor: Precisely. Your data samples are very diverse, and your findings are highly meaningful and worth research. (29) But I think you only see the native samples so that the scope is too narrow. Your conclusions might be different if you studied a centre in a different cultural or geographical context.

Student: That's a very good point. I should address that in my conclusion.

Professor: Yes. Speaking of other contexts, I recall a study on a similar centre in Portland, in the United States. Its success wasn't measured in profit, but in its influence. (30) It became an example for other centres worldwide.

Student: Oh, that's a great example to cite for comparison. Thank you, professor!

Professor: If you have any further questions, please don't hesitate to let me know...

That's the end of Part 3. You now have half a minute to check your answers to Part3.

Part 4

Part 4, you will hear a university lecture on the uses of charcoal. First you have some time to look at questions 31 to 40.

Now listen carefully and answer questions 31 to 40.

Good morning. Today, we're continuing our series on sustainable materials with a fascinating look at charcoal. Now, most of you probably associate charcoal with barbeques, but its applications are far more diverse and historically significant.

So, let's begin by addressing the fundamental question: what exactly is charcoal? Technically, and most accurately, charcoal is the black carbon-rich residue that remains after heating organic matter — this matter is typically wood, but it can also include various other plant biomass—in an environment with low (31) **oxygen** levels. This specific industrial process is known as pyrolysis; it's a carefully controlled, oxygen-starved form of combustion that carbonises the material without allowing it to burn away completely into ash.

The history of charcoal is truly ancient, with its production methods dating back many thousands of years. Interestingly, during the 19th century, indigenous communities living in Portugal had their own distinct name for this substance; they didn't refer to it using the common term 'charcoal'; instead, they called it (32) **'black earth'**, which intriguingly hints at its primary application in agriculture and soil management during that period.

And indeed, throughout history, its role wasn't limited to just providing fuel for heating. It was very commonly utilised as a highly effective soil amendment by various cultures. A most notable example are the indigenous inhabitants of the Amazon Basin, they combined it thoroughly with (33) **animal waste**, to create fertiliser that greatly enhanced soil quality.

However, its most important historical use was in early European industries. It was a vital fuel source for smelting (34) **iron**, which was essential for making tools, weapons, and machinery that changed the world.

Now, turning to the agricultural benefits, charcoal is especially important in farming, and scientists are very excited about it. Recent studies clearly show that adding 'biochar' — which is the scientific name for treated charcoal — to bad soil can greatly and permanently improve its quality and health. For example, many farm experiments have proven that using it can even double the harvest of (35) **corn**.

How does it achieve this? The incredibly porous, honeycomb-like structure of charcoal acts like a miniature coral reef within the soil matrix, providing an ideal habitat for beneficial microbes and fungi, and, most importantly, helping vital nutrients and minerals to get directly to the (36) **roots** of the plants more quickly, thereby promoting stronger growth.

Furthermore, this porous structure provides a habitat for beneficial organisms, reducing evaporation losses and consequently diminishing the need for frequent irrigation, which is crucial for retaining (37) **water** in the soil.

Another excellent and sustainable aspect of its production is that it can be manufactured from various kinds of agricultural waste, effectively turning a disposal problem into a valuable solution. A common example is using the otherwise discarded shells from (38) **peanuts**.

Finally, and perhaps most importantly in our current era, are its impressive environmental benefits. Firstly, its stability allows for better absorption of (39) **carbon**, storing it underground for centuries. This process helps combat climate change by removing this element from the active cycle. Secondly, through advanced thermochemical conversion processes, this material can be used to produce not only biofuels like gasoline but also useful (40) **drugs**, demonstrating its significant potential in the pharmaceutical industry. It is truly a substance that bridges our ancient past with a sustainable future, offering innovative solutions to some of today's most pressing environmental and agricultural challenges. Its potential seems limited only by our imagination...

That's the end of Part 4. You now have half a minute to check your answers to Part4.
