Part 2

Part 2, you will hear a manager introducing the summer work on Parson Fruit Farm. First. You have some time to look at questions 11 to 15.

Now listen carefully and answer questions 11 to 15.

Right then everyone, welcome to Parson Fruit Farm! Great to see so many keen faces ready for a summer of hard but rewarding work. I'm Ben, the farm manager, and I'll be giving you a quick rundown of what to expect, starting with where you'll be laying your heads after a long day.

We know most of you are here for the season and need somewhere affordable. So, accommodation options. First off, we have a dedicated campsite right on the farm's western edge. It's pretty basic – just pitches for tents, shared showers and toilets. (11) And there's the motel in Parson village. The village is just a short distance away - only about five minutes by car - making the motel very conveniently located for the farm. Thirdly, for those wanting a bit more social life, there's the youth hostel – it offers budget accommodation, but the facilities aren't the best.

Now, weather this summer. Accurate long-term forecasts are nearly impossible - while our wet spring was ideal for fruit harvesting, (12) summer weather remains completely unpredictable. It might be drier than average, or conversely, we could get more rain than usual - there's just no telling at this point. Just come prepared for everything – sun hat one minute, waterproof the next!

Alright, down to the work itself. We've got two main areas where we need help: out in the orchards and fields, and inside the packing shed. First, the outdoor work. A big part of this is operating machinery, specifically driving tractors for moving fruit bins and general haulage. Don't worry if you haven't got years of experience – we provide full training on our specific machines. Although 13 to 18-year-olds can legally drive tractors in some areas, (13) we insist on certified qualifications – you must hold a license at our farm.

The second main area is working in the shed – that's our packing and grading operation. This is where the fruit comes in from the fields to be sorted and packed for supermarkets. The good news is the shed is air-conditioned! So, while it can get warm outside, inside we keep it comfortable for you. (14) But the noise level can be significant with all the machinery operating - there's a persistent background hum along with occasional louder spikes. That's why protective ear equipment is mandatory for everyone working inside the shed. We provide earplugs or defenders – your choice.

Finally, a few important safety reminders and bits of advice. First and foremost: hydration is critical. (15) So be sure to eat properly and stay hydrated - it's physically demanding and you'll need to keep your energy up. And don't worry too much about damaging plants; they'll grow back. Most importantly, always keep your phone on you for emergencies. Keep it on silent during work, obviously, but have it on your person.

So, that's the essentials! Any immediate questions?

**Before you hear the rest of the talk, you have some time to look at questions 16 to 20.
Now listen and answer questions 16 to 20.**

All right. I like to quickly go over where everything is located.

So, look at your maps of Parson's fruit farm and find the main yard. Towards the bottom of your maps that really is the center of the farm.

Okay. The first place I'll mention is the workshop. (16) This is close to the main yard. But you actually have to leave the yard to get into it. So, you need to take the road that goes out to the Orchards. And you access the workshop from there.

Then, the lunchroom. (17) On the north side of the map, there's a road that curves sharply round to the left. Halfway round this bend, you'll find the entrance to the lunchroom. It's a pretty place next to the river, and also beside a little wood.

You also need to be able to find the farm office. (18) So, if you look at the main yard, you'll see there's a number of different buildings located around it. And the farm office is the smallest one. It's on the south side.

Obviously, the first aid room is important. (19) Now this is close to the main yard. So, it's quick to get there. And it's actually more or less in the middle of your maps. That little building that's attached to the farmhouse.

Then the store shed. (20) From the main yard, take the road heading north. Go past the farmhouse and turn right. The store is down that road. If you come to the vegetables garden, you've gone too far.

Now the other thing is the farmhouse is further than you'd expect...

Part 2

You will hear a man giving information about a scenic train journey to Whistler. First, you have some time to look at Questions 11 to 14.

Now listen carefully and answer questions 11 to 14.

Good morning everyone! Today, I'm here to tell you about one of the most beautiful train rides you can take right here in Canada —the trip from Vancouver up to Whistler. Whether you're a visitor or a local, this journey is something special. Let me tell you why...

First off, the train itself is fantastic. Well, lots of passengers wonder if there's free WiFi. We have fast WiFi available, though there's a small fee to use it. (11) We've got very cozy seats in the enclosed areas, you know, the normal carriages – really soft and perfect for relaxing. Some people expect we have glass-dome cars or free workshops about wild animals and plants, but that service is only available on our other special train. And one of the best things? (12) For a big part of the trip, especially early on, you get amazing views of the ocean right from your window. It's really quite beautiful! shortly, we'll be pointing out the breathtaking natural landscapes along our route!

Now, before you book, there are a couple of important things you should know. One is about food. (13) You can enjoy a proper hot breakfast on board – eggs, bacon, the works. It's cooked fresh in the train's kitchen. And our sightseeing train is very popular with families. Children and elderly passengers are all warmly welcome aboard! In addition, everyone can bring one suitcase, with generous storage space available at the front and back of our carriage. Don't worry about those! (14) But remember, to return to Vancouver, you'll need to use a bus or a different transport service. The train doesn't do a round trip back down the same way on the same day. So, plan your return separately. If you're looking to book tickets, usually one week in advance is sufficient. You can check the exact timing on our official website, there's no need to book much earlier than that.

Before you hear the rest of the talk, you have some time to look at questions 15 to 20. Now listen and answer questions 15 to 20.

Alright, let's talk about what you'll see outside the window! The scenery changes constantly, and each part has its own wonder.

As we climb into the Coast Mountains, get ready for some engineering marvels. (15) We'll go through several dark mountain tunnels with the length of more than ten kilometres – they were dug through the rock over a century ago!

Coming up next is Squamish Bay. Look out towards the water here! This spot is famous for wildlife. (16) A particular species of dolphin frequently feeds here, especially during this season when their favorite herring migrate through these waters, so there's an excellent chance of dolphin sightings.

Soon after, we pass Britannia Bay. This place has a long history. (17) You'll see the old site of a huge mine – mostly copper – that closed years ago. The big buildings by the water are leftovers from that busy time.

Now, look up to your left! That massive shape is the Stawamus Chief. It's impossible to miss. (18) It's basically one gigantic rock, one of the biggest chunks of granite in the whole world! Climbers love it, but we'll just admire it from here.

Hold on, the next highlight is my personal favourite: Cheakamus Canyon. The train slows right down here so you can take it in. (19) You'll look down into a valley where a powerful river flowing fast far below. Honestly, this breathtaking view is exclusive to our train journey, no other mode of transportation offers this spectacular perspective.

Finally, we arrive near Whistler village. Before we reach the station, glance out at the slopes and forests. (20) You'll notice some really special, signature residences tucked away in the trees, beautiful mountain places owned by people who love the outdoors.

And that brings us to the end of our stunning 3-hour journey. You step off the train right in the heart of Whistler, ready to explore. It's more than just transport; it's an unforgettable sightseeing adventure. Any questions?

That is the end of Part2. You now have half a minute to check your answers to Part2.

Part 2

Part 2, you will hear a man give us some details about a wide range of projects about land care. First you have some time to look at questions 11 to 15.

Now listen carefully and answer questions 11 to 15.

Good afternoon, everyone. I'm Michael, from the Green Valley Land Care initiative, an organization specializing in protecting our living environment. I'm here today to introduce a variety of environmental projects to you, as well as share some exciting updates and volunteer opportunities. Hope you can join us on the volunteering program that interests you the most. Let me start with our Bushland Program. Over the past six months, we've been working on rehabilitating the western section of Green Valley Park. We've always sent out notices beforehand, **(11) but I know local people were unpleasant when we began removing certain trees and shrubs.** Let me clarify, these were in fact non-native species that were choking out local plants. We're creating a healthier ecosystem, and make sure there won't be any loss of recreation ground.

Moving on to our Frog app developing program. We've developed a smartphone app, hoping that it could provide us with information about the habitat. Although the specialists can't wait to try the new function of recording mating calls among frogs, it's not going to happen in the immediate future. **(12) But the most valuable function is identifying different kinds of frogs in these areas.**

Now school groups can participate in Water Monitoring Project. The project covers a wide range of water bodies, like streams, ponds and rivers. **(13) While tasks like chemical testing are reserved for high schoolers, primary students actively contribute by capturing water insects.** The kids love using our magnifying kits. And at the same time, our volunteers will use a thermometer to measure the water temperature.

And for those of you who are interested in joining our program, the process is straightforward. **(14) Just visit our website and complete the registration form.** If you have someone to vouch for you, that would be perfect, although that's not a necessity. After you successfully registered, we will provide an online training workshop.

And after you successfully being part of the volunteering team, you can get an official uniform at half the normal price on our website. **(15) Meanwhile, our business partners from this region will give you special offers, about 30% OFF.** And our volunteers will have a 50% discount on all the public transport, including trains, buses and underground.

Before you hear the rest of the talk, you have some time to look at questions 16 to 20.
Now listen and answer questions 16 to 20.

Next, I'll introduce volunteering opportunities to protect our local environment. Let me walk you through five hands-on projects needing volunteers this season.

The first one is Native Seed Propagation Initiative, which focuses on reviving indigenous plants. Many native grasses and wildflowers have disappeared due to urbanisation. We've already had staff sowing seeds and nurturing seedlings. **(16) And we need help in the kitchen preparing local food for visitors.**

Now, while we're rebuilding native habitats, we must also tackle existing threats. **Moving on to Invasive Species Removal Campaign.** Species like Lantana and Blackberry smother native vegetation, blocking sunlight and stealing nutrients. Every Saturday, local experts armed with loppers and gloves target infested zones. **(17) And we require volunteers to distribute flyers around neighboring suburbs to raise the awareness of local residents.**

Next program, Wildlife Corridor Maintenance. These corridors let creatures move safely between fragmented habitats. **(18) If you are experienced hikers, this is a perfect job for you, leading groups walking through our bush trails.**

(19) Then, we also need knowledgeable volunteers at the Heritage Food Stall, explaining the history and culture of Indigenous Australian food. The program will not only be informative but also encourage people to protect wild plants, because they often use natural plants to cook. Finally, **Erosion Control Taskforce.** Heavy rains have worsened erosion along the riverbank, washing precious topsoil into the river. An environmental photography exhibition will be held to warn people about the serious consequence. **(20) Volunteers can assist in exhibiting photograph in the city museum.**

All positions offer great opportunities to connect with...

That's the end of Part2. You now have half a minute to check your answers to Part2.
