

和豆包的对话_0825

用户：

- 帮我生成word：完整原文（证据句红色加粗 + Q号标注）梳理原文逻辑，在每段后面加上翻译和出题人底层逻辑
- 逐题解析版（完整题干 + 答案红色加粗 + 中文解析 + English Explanation）都不能省略字，一题一答案加详细解析
- 高频词汇 + 同义替换单独列出来，原文不能省略，必须高亮答案句，解析中英文相结合，尽量详细一点。

豆包：

Rubber 雅思阅读备考资料

一、完整原文（证据句红色加粗 + Q号标注）+ 段落翻译 + 出题人底层逻辑

Paragraph 1

The plants that produce rubber are spread right across the globe, and grow in many-different habitats (Q1). One might think it likely, therefore, that humankind has known about-rubber for thousands of years. Yet, unlike other crops of economic importance, rubber led a-relatively anonymous life until the last 150 years or so. The Indians of South America appear to-be the first people to have understood the properties of rubber, and the Aztecs of what is now-Mexico were the first to be recorded using the substance; a wall painting dating back to the sixth-century depicts a scene of a tribute offering of crude rubber (Q2). With the arrival of Columbus-in the Americas and the resulting Spanish influx, further evidence starts to appear concerning-the Native American use of rubber. Antonio de Herrera y Tordesillas describes a ritual game-played with a rubber ball at the court of the Aztec Emperor Montezuma II, and the Mayan and-Toltec people are known to have taken part in similar activities. Rubber was also used to make-raincoats, shoes, jars, torches and musical instruments, all of which must have been made from-

the indigenous **Castilla elastica**, as the **Para rubber plant** now favoured for rubber cultivation-
does not grow in the Mexican region (Q3).

段落翻译

产橡胶的植物遍布全球，生长在多种不同的栖息地中。因此，人们可能会认为人类几千年前就已了解橡胶。但与其他经济作物不同，橡胶在过去约150年之前，一直鲜为人知。南美洲的印第安人似乎是最早了解橡胶特性的人群，而如今墨西哥地区的阿兹特克人是有记载的最早使用橡胶的人群——一幅可追溯至6世纪的壁画，描绘了供奉生橡胶的场景。随着哥伦布抵达美洲及随后西班牙人的涌入，关于美洲原住民使用橡胶的更多证据开始出现。安东尼奥·德·埃雷拉·托德西利亚斯（Antonio de Herrera y Tordesillas）记载，阿兹特克皇帝蒙特祖马二世（Montezuma II）的宫廷中，人们会用橡胶球进行仪式性游戏，玛雅人和托尔特克人也参与过类似活动。橡胶还被用来制作雨衣、鞋子、罐子、火把和乐器，这些物品肯定都由当地的**卡斯蒂利亚弹性树（Castilla elastica）**制成，因为如今橡胶种植首选的**帕拉橡胶树（Para rubber plant）**并不生长在墨西哥地区。

出题人底层逻辑

1. 多考点集中段（Q1、Q2、Q3，判断题）：

- Q1：通过“spread right across the globe”与题干“only in certain regions”形成反义，考查“范围细节判断”；
- Q2：仅提及6世纪壁画“供奉生橡胶”，未提“提取（extracted）”，考查“动作细节有无判断”；
- Q3：对比两种橡胶树的生长区域，未提“质量（quality）”，考查“无中生有信息判断”；

2. 以“橡胶植物分布→早期人类使用”开篇，用“yet”转折突出橡胶“早期鲜为人知”的特点，通过“6世纪壁画”“不同族群使用场景”提供具体细节；出题人侧重“范围词（across the globe vs certain regions）”“动作词（using vs extracted）”和“比较词（未提quality）”，这些是判断题的核心信号。

Paragraph 2

The first description of latex (liquid rubber) extraction was made by Juan de Torquemada, who noted that if a receptacle was not at hand the Native Americans would place the latex on their bodies to allow it to solidify. However, **no real interest in rubber was shown by any European until Charles de la Condamine, a French mathematician, published an account of his journey to South America in 1735** (Q4). The journey was undertaken on behalf of the Paris Academy of Sciences to measure an arc of the meridian line on the equator, but the journey home was to turn out to be more significant than the true purpose of the trip. Condamine explored Brazil and Peru-

and discovered how the local people used one single piece of coagulated latex to make boots.- The boots were impervious to water and, when smoked, looked like real leather. In 1747 the first-description of the rubber tree and latex tapping was made by a military engineer and amateur-botanist, François Fresneau, who was posted to French Guiana. The publications of Condamine-and Fresneau created considerable excitement among French scientists, and an attempt was-made to discover a solvent that could turn the crude rubber into a substance for commercial-exploitation.

段落翻译

胡安·德·托尔克马达（Juan de Torquemada）首次描述了乳胶（液态橡胶）的提取过程，他提到，若手边没有容器，美洲原住民会将乳胶涂在身上使其凝固。然而，直到1735年，法国数学家夏尔·德·拉孔达明（Charles de la Condamine）发表了他的南美旅行记述后，欧洲人才对橡胶产生真正的兴趣。他的旅行是受巴黎科学院委托，为测量赤道处的子午线弧度，但返程途中的发现比旅行初衷更具意义。拉孔达明考察了巴西和秘鲁，发现当地人用一块凝固的乳胶制作靴子——这种靴子防水，经过熏制后看起来像真皮。1747年，被派驻法属圭亚那的军事工程师兼业余植物学家弗朗索瓦·弗雷斯诺（François Fresneau），首次描述了橡胶树和乳胶采集过程。拉孔达明和弗雷斯诺的著作在法国科学界引发极大关注，人们开始尝试寻找一种溶剂，将生橡胶转化为可商业开发的物质。

出题人底层逻辑

1. 核心考点（Q4，判断题）：通过“no real interest... until Charles de la Condamine (French-mathematician)”明确“法国数学家激发欧洲人兴趣”，考查“人物与事件的因果对应”；
2. 以“乳胶提取描述→欧洲人兴趣起源”展开，用“however”强化“欧洲人此前无兴趣”的转折，通过“Condamine的旅行发现”和“Fresneau的描述”构建“早期研究 timeline”；出题人关注“人物身份（French mathematician）”和“时间节点（1735年）”，这类“人物-事件-时间”绑定信息是判断题的高频考点。

Paragraph 3

In 1818 a British medical student named James Syme first used rubber to make **waterproof-cloth** (Q7). Another early use of the substance was as an eraser of pencil marks, hence the-name ‘rubber’. This was complemented by balloons, rubber bands, braces, boots for the-army and other ideas that met with varying degrees of success. In 1820 Thomas Hancock, an-English manufacturer of rubber goods such as driving belts, industrial rollers and rubber hoses-, invented a machine he called the ‘masticator’, which chewed up **waste strips** for reuse (Q-8). It was discovered that the masticated rubber was more malleable, while maintaining much-

of its elasticity. In Scotland at the same time, Charles Mackintosh had discovered a way of using rubber as waterproofing material, by a process he patented in 1823. Hancock and Mackintosh joined forces in 1834, and three years later Hancock invented a machine for spreading rubber onto material.

段落翻译

1818年，英国医学生詹姆斯·赛姆（James Syme）首次用橡胶制作出**防水布**。橡胶的另一早期用途是擦除铅笔痕迹，“rubber”（橡皮擦）这一名称也由此而来。此后，人们又将橡胶用于制作气球、橡皮筋、支架、军用靴子等，这些尝试的成功率各不相同。1820年，英国橡胶制品制造商托马斯·汉考克（Thomas Hancock，主营传动带、工业滚筒和橡胶软管）发明了一台名为“揉胶机（masticator）”的机器，- 可将**橡胶废料条**嚼碎后重新利用。人们发现，揉制后的橡胶更具延展性，同时仍保留大部分弹性。与此同时，苏格兰人查尔斯·麦金托什（Charles Mackintosh）发现了将橡胶用作防水材料的方法，并于1823年为该工艺申请专利。1834年，汉考克与麦金托什合作，三年后汉考克发明了将橡胶涂在材料上的机器。

出题人底层逻辑

1. 多考点集中段（Q7、Q8，摘要填空）：

- Q7：通过“first used rubber to make waterproof cloth”直接提取“防水布”，考查“产品细节提取”；
- Q8：通过“chewed up waste strips for reuse”直接提取“waste strips”，考查“回收对象细节提取”；

2. 以“橡胶早期商业应用”展开，按时间线（1818→1820→1823→1834）梳理“产品发明→技术改进”，用“first used”“invented”“discovered”等词突出“首次/创新”属性；出题人关注“时间节点”和“具体产品/对象（waterproof cloth, waste strips）”，这类“时间-事物”对应是摘要填空的核心考点。

Paragraph 4

Despite their beneficial qualities, such as waterproofing, rubber goods were still not particularly popular as they had some major flaws, including the fact that they dissolved malodorously. They also became pliant when warm and **rigid** when cold (Q9). Then in 1839 the American Charles Goodyear discovered that it was possible to **stabilise** rubber by mixing it with sulphur while exposing it to heat - a process he called vulcanisation - and the full versatility of this extraordinary substance became apparent (Q5, Q10).

段落翻译

尽管橡胶制品具有防水等优点，但仍未广泛流行，因为它们存在重大缺陷：溶解时会散发恶臭，且遇热变软、遇冷变硬。直到1839年，美国人查尔斯·古德伊尔（Charles Goodyear）发现，将橡胶与硫磺混合并加热，可使橡胶**稳定**——他将这一过程称为“硫化（-vulcanisation）”，橡胶这种非凡物质的全部多样性用途也由此显现。

出题人底层逻辑

1. 多考点集中段（Q5、Q9、Q10）：

- Q5（判断题）：仅提及“discovered that it was possible to stabilise rubber”，未提“偶然（-by accident）”，考查“无中生有判断”；
- Q9（摘要填空）：通过“became pliant when warm and rigid when cold”提取“rigid”，考查“反义词细节提取”；
- Q10（摘要填空）：通过“discovered that it was possible to stabilise rubber”提取“stabilise-”，考查“动作细节提取”；

2. 以“橡胶缺陷→硫化技术突破”展开，用“despite”强化“优点与缺陷”的对比，“then”突出“技术转折点”；出题人关注“反义词（pliant vs rigid）”“动作词（stabilise）”和“未提信息（by accident）”，这类细节是填空和判断题的关键。

Paragraph 5

Rubber goods could now be manufactured which had all the beneficial qualities of the material- , such as durability, elasticity and variability, but which were not sticky, soluble or governed by- the vagaries of the weather. The economic potential of rubber was now clearly evident. It played- an important role in the Industrial Revolution, being employed in the **steam engines** found in- factories, mills, mines and railways (Q11). It made a triumphant entrance as a new and innovative- material at the Great Exhibition of 1851, where shoes, airbeds, furniture and clothing made out- of newly improved rubber were proudly displayed.

段落翻译

如今生产的橡胶制品，既具备橡胶的所有优点（耐用性、弹性、多样性），又不粘手、不溶解，也不受天气变化影响。橡胶的经济潜力至此完全显现。它在工业革命中发挥重要作用，被用于工厂、磨坊、矿山和铁路中的**蒸汽机**。1851年万国博览会上，橡胶作为创新新材料惊艳亮相，展会上自豪地展示了用改良橡胶制作的鞋子、气垫床、家具和服装。

出题人底层逻辑

1. 核心考点（Q11，摘要填空）：通过“being employed in the steam engines”提取“steam-engines”，考查“工业应用细节提取”；
2. 以“硫化后橡胶的优势→工业应用”展开，用“played an important role in the-Industrial Revolution”强调橡胶的历史地位，通过“1851年万国博览会”提供具体场景；出题人关注“工业革命相关事物（steam engines）”，这类“时代-事物”对应是摘要填空的高频考点。

Paragraph 6

One of the most important rubber inventions was made in 1888, when an Irishman called John-Boyd Dunlop produced the first **pneumatic tyre** (Q12). Solid rubber tyres had been used for the-previous 18 years, but Dunlop’s new design, which he updated in 1890, immediately became-popular. In 1895 Dunlop’s tyres were first used in motor cars, and with the **mass production-**of cars just over the horizon the rubber industry had never looked healthier (Q13). **The import-levels of rubber over the nineteenth century bear witness to its irrepressible rise. In 1830-Britain had imported just 211 kg of crude rubber. This had risen to 10,000 kg in 1857, and by-1874 levels were just under six times as much again** (Q6).

段落翻译

橡胶最重要的发明之一出现在1888年：爱尔兰人约翰·博伊德·邓禄普（John Boyd Dunlop）发明了首个**充气轮胎**。此前18年人们一直使用实心橡胶轮胎，但邓禄普1890年改良后的新-设计迅速流行。1895年，邓禄普轮胎首次用于汽车，而随着汽车**大规模生产**即将到来，橡胶行业迎来-前所未有的繁荣。**19世纪橡胶进口量的增长，见证了它的势不可挡。1830年，英国仅进口211公斤生-橡胶；1857年增至10000公斤；到1874年，进口量接近1857年的6倍。**

出题人底层逻辑

1. 多考点集中段（Q6、Q12、Q13）：
 - Q6（判断题）：通过“risen to 10,000 kg... six times as much again”与题干“fell”形成反义，-考查“数字趋势判断”；
 - Q12（摘要填空）：通过“produced the first pneumatic tyre”提取“pneumatic tyre”，考查-“发明成果细节提取”；
 - Q13（摘要填空）：通过“mass production of cars just over the horizon”提取“mass-production”，考查“产业趋势细节提取”；
- 2.

以“橡胶关键发明→汽车产业关联→进口量增长”展开，用“most important”突出充气轮胎的地位，通过“1830→1857→1874”的数字对比强化“增长趋势”；出题人关注“数字变化（risen, six-times）”和“发明成果（pneumatic tyre）”，这类“数字-趋势”“人物-发明”对应是判断和填空的核心考点。

二、逐题解析版（完整题干 + 答案红色加粗 + 中文解析 + English Explanation）

Questions 1–6（判断题）

题干共性说明

Do the following statements agree with the information given in Reading Passage 1? In boxes 1–6 on your answer sheet, write **TRUE** if the statement agrees with the information **FALSE** if the statement contradicts the information **NOT GIVEN** if there is no information on this

1. Rubber plants grow only in certain regions of the world.

- **完整题干：**橡胶植物仅生长在世界上的特定区域。
- **答案：** **FALSE**
- **中文解析：**根据Paragraph 1，“产橡胶的植物遍布全球，生长在多种不同的栖息地中（The plants that produce rubber are spread right across the globe, and grow in many different habitats）”。 “spread right across the globe”（遍布全球）与题干“only in certain regions”（仅在特定区域）完全矛盾，故为**FALSE**。
- **English Explanation：** According to Paragraph 1, "the plants that produce rubber are spread-right across the globe". "Spread right across the globe" directly contradicts "only in certain-regions", so the answer is **FALSE**.

2. Rubber was extracted in Mexico as early as the sixth century.

- **完整题干：**早在6世纪，墨西哥就已提取橡胶。
- **答案：** **NOT GIVEN**
- **中文解析：**根据Paragraph 1，6世纪的壁画“描绘了供奉生橡胶的场景（a wall painting dating-back to the sixth century depicts a scene of a tribute offering of-

crude rubber)”，仅提及“使用/供奉生橡胶”，未提及“提取（extracted）”这一动作（即从橡胶树获取乳胶的过程）。题干信息无依据，故为NOT GIVEN。

- **English Explanation:** According to Paragraph 1, a sixth-century mural shows "a tribute offering of crude rubber", but there is no mention of "extraction" (the process of obtaining latex from rubber plants). There is no basis for the statement, so the answer is NOT GIVEN.

3. Rubber from the Castilla elastica plant is of poorer quality than that from the Para plant.

- **完整题干：**卡斯蒂利亚弹性树产的橡胶质量比帕拉橡胶树差。
- **答案：**NOT GIVEN
- **中文解析：**根据Paragraph 1，“墨西哥的橡胶制品由卡斯蒂利亚弹性树制成，帕拉橡胶树不生长在墨西哥地区（all made from Castilla elastica; Para rubber plant does not grow in-Mexican region）”，仅对比两种树的“生长区域”，未提及“质量（quality）”的优劣。题干信息无依据，故为NOT GIVEN。
- **English Explanation:** According to Paragraph 1, the text only compares the "growing regions" of Castilla elastica and Para rubber plant, with no mention of "quality". There is no basis for the statement, so the answer is NOT GIVEN.

4. A French mathematician inspired real interest in rubber amongst Europeans.

- **完整题干：**一位法国数学家激发了欧洲人对橡胶的真正兴趣。
- **答案：**TRUE
- **中文解析：**根据Paragraph 2，“直到1735年，法国数学家夏尔·德·拉孔达明发表南美旅行记述后，欧洲人才对橡胶产生真正的兴趣（no real interest in rubber was shown by any European until Charles de la Condamine, a French mathematician, published an account of his journey）”。“French mathematician”对应“Charles de la Condamine”，“inspired real interest”对应“no-real interest... until”，与题干表述一致，故为TRUE。
- **English Explanation:** According to Paragraph 2, "no real interest in rubber was shown by any-European until Charles de la Condamine, a French mathematician, published his journey account". This matches the statement "a French mathematician inspired real interest in rubber amongst Europeans", so the answer is TRUE.

5. The process of vulcanisation was discovered by accident.

- **完整题干：**硫化过程是偶然发现的。
- **答案：**NOT GIVEN
- **中文解析：**根据Paragraph 4，“古德伊尔发现将橡胶与硫磺混合加热可使其稳定，称为硫化（- Charles Goodyear discovered that it was possible to stabilise rubber by mixing it with sulphur- while exposing it to heat - a process he called vulcanisation）”，仅描述“发现过程和命名”，未提及“偶然（by accident）”或“刻意研究”。题干信息无依据，故为NOT GIVEN。
- **English Explanation：** According to Paragraph 4, the text describes "Goodyear discovered- vulcanisation by mixing rubber with sulphur and heat" but provides no information about "being- discovered by accident". There is no basis for the statement, so the answer is NOT GIVEN.

6. Imports of crude rubber into Britain fell during the nineteenth-century.

- **完整题干：**19世纪英国生橡胶进口量下降。
- **答案：**FALSE
- **中文解析：**根据Paragraph 6，“19世纪橡胶进口量见证了它的势不可挡的增长：1830年211公斤→1857年10000公斤→1874年接近1857年的6倍（The import levels... irrepressible rise; 211 kg→10,000 kg→six times as much）”。“rise”“six times as much”与题干“fell”（下降）完全矛盾，故为FALSE。
- **English Explanation：** According to Paragraph 6, "rubber imports into Britain rose from 211 kg (1830) to 10,000 kg (1857) and nearly six times that by 1874". "Rose" contradicts "fell", so the answer is FALSE.

Questions 7–13（摘要填空）

完整题干

Complete the summary below. Choose NO MORE THAN THREE WORDS from the passage for each answer. Write your answers in boxes 7–13 on your answer sheet.

The Commercial Development of Rubber Early European travellers gave accounts of various- rubber objects in use in Central and South America, and these accounts created interest in the- commercial exploitation of rubber. In 1818, 7 _____ was produced using rubber, and in 1820 a- machine was invented for recycling 8 _____ of rubber. Over the next few years, other attempts- were made to improve rubber, but some problems remained. For example, rubber products- smelt bad when they were dissolved, and could turn either soft or 9 _____ depending on the- temperature. However, in 1839 a new process to 10 _____ the substance greatly increased its-

potential. For example, rubber was used in the creation of the 11 _____ industry during the Industrial Revolution. Then in 1888 the 12 _____ was developed, and a few years later the 13- _____ of the motor car began.

7.

- **答案:** waterproof cloth
- **中文解析:** 根据Paragraph 3, “1818年, 英国医学生詹姆斯·赛姆首次用橡胶制作出防水布 (In 1818... James Syme first used rubber to make waterproof cloth) ”。题干 “1818, ... was produced using rubber” 直接对应 “first used rubber to make waterproof cloth”, 提取 “waterproof cloth”, 符合 “NO MORE THAN THREE WORDS” 要求。
- **English Explanation:** According to Paragraph 3, "In 1818 James Syme first used rubber to make waterproof cloth". The question's "1818, ... was produced using rubber" matches this sentence, so the answer is waterproof cloth.

8.

- **答案:** waste strips
- **中文解析:** 根据Paragraph 3, “1820年, 托马斯·汉考克发明揉胶机, 可将橡胶废料条嚼碎后重新利用 (In 1820... invented a machine... which chewed up waste strips for reuse) ”。题干 “1820 a machine for recycling... of rubber” 对应 “chewed up waste strips for reuse”, 提取 “waste strips”, 符合字数要求。
- **English Explanation:** According to Paragraph 3, "In 1820 Hancock invented a machine that chewed up waste strips for reuse". The question's "machine for recycling... of rubber" matches "chewed up waste strips for reuse", so the answer is waste strips.

9.

- **答案:** rigid
- **中文解析:** 根据Paragraph 4, “橡胶遇热变软、遇冷变硬 (They also became pliant when warm and rigid when cold) ”。题干 “turn either soft or... depending on the temperature” 对应 “became pliant... and rigid... when... warm/cold”, “soft” 对应 “pliant”, 故提取 “rigid”, 符合字数要求。
- **English Explanation:** According to Paragraph 4, "rubber became pliant when warm and rigid when cold". The question's "turn either soft or... depending on temperature" matches this, so the answer is rigid.

10.

- **答案:** stabilise
- **中文解析:** 根据Paragraph 4, “1839年, 古德伊尔发现通过混合硫磺加热可稳定橡胶 (in 1839...- Charles Goodyear discovered that it was possible to stabilise rubber by mixing it with sulphur- while exposing it to heat) ”。题干 “1839 a new process to... the substance” 对应 “discovered- that it was possible to stabilise rubber”, 提取 “stabilise”, 符合字数要求。
- **English Explanation:** According to Paragraph 4, "in 1839 Goodyear discovered a process to- stabilise rubber". The question's "1839 a new process to... the substance" matches this, so the- answer is stabilise.

11.

- **答案:** steam engines
- **中文解析:** 根据Paragraph 5, “橡胶在工业革命中被用于蒸汽机 (It played an important role in- the Industrial Revolution, being employed in the steam engines) ”。题干 “used in the creation- of the... industry during the Industrial Revolution” 对应 “employed in the steam engines... in the- Industrial Revolution”, 提取 “steam engines”, 符合字数要求。
- **English Explanation:** According to Paragraph 5, "rubber was employed in the steam engines- during the Industrial Revolution". The question's "used in the creation of the... industry during- the Industrial Revolution" matches this, so the answer is steam engines.

12.

- **答案:** pneumatic tyre
- **中文解析:** 根据Paragraph 6, “1888年, 邓禄普发明首个充气轮胎 (in 1888... John Boyd Dunlop- produced the first pneumatic tyre) ”。题干 “1888 the... was developed” 对应 “produced the- first pneumatic tyre”, 提取 “pneumatic tyre”, 符合字数要求。
- **English Explanation:** According to Paragraph 6, "in 1888 Dunlop produced the first pneumatic- tyre". The question's "1888 the... was developed" matches this, so the answer is pneumatic tyre.

13.

- **答案:** mass production
- **中文解析:** 根据Paragraph 6, “随着汽车大规模生产即将到来 (with the mass production of cars- just over the horizon) ”。题干 “a few years later the... of the motor car began” 对应 “mass- production of cars just over the horizon”, 提取 “mass production”, 符合字数要求。

- **English Explanation:** According to Paragraph 6, "with the mass production of cars just over the horizon". The question's "a few years later the... of the motor car began" matches this, so the answer is mass production.

三、高频词汇 + 同义替换

(一) 高频词汇（词性 + 中文释义 + 原文出处 + 高亮答案句）

词汇 (Word)	词性 (Part of-Speech)	中文释义 (-Chinese Definition)	原文出处 (-Source Paragraph)	高亮答案句 (-Highlighted Answer Sentence)
habitat	n.	栖息地；生长环境	1	The plants that produce rubber are spread right across the globe, and grow in many different habitats .
crude rubber	n. phr.	生橡胶；未加工-橡胶	1	a wall painting-dating back-to the-sixth century-depicts a-scene of-a tribute-offering of- crude rubber .
latex	n.	乳胶；液态橡胶	2	The first-description of- latex (-liquid rubber-) extraction-was made-

				by Juan de-Torquemada.
coagulate	v.	凝固；凝结	2	Condamine... discovered how the local people used one single piece of coagulated latex to make boots.
masticator	n.	揉胶机（橡胶加工设备）	3	Thomas Hancock... invented a machine he called the ‘ masticator - ’, which chewed up waste strips for reuse.
malleable	adj.	可延展的；有韧性的	3	It was discovered that the masticated rubber was more malleable , while maintaining much of its elasticity.
vulcanisation	n.	硫化（橡胶稳定工艺）	4	a process he called vulcanisation - and the full versatility of this

				extraordinary substance became apparent.
pneumatic tyre	n. phr.	充气轮胎	6	John Boyd Dunlop produced the first pneumatic tyre .
mass production	n. phr.	大规模生产	6	with the mass-production of cars just over the horizon- the rubber industry had never looked healthier.

(二) 同义替换 (原文词 + 替换词 + 对应题目/出处 + 高亮对应句)

原文词 (Original Word)	同义替换 (- Synonym)	对应题目/出处 (- Relevant Question/Source)	高亮对应句 (- Highlighted Matching Sentence)
spread right across- the globe (遍布全- 球)	grow only in- certain regions (仅- 在特定区域生长)	Q1 (1)	The plants that- produce rubber- are spread right- across the globe- – this contradicts "- grow only in certain- regions".
a tribute offering- of crude rubber (- 供奉生橡胶)	rubber was extracted (橡胶被提- 取)	Q2 (1)	a wall painting...- depicts a tribute- offering of crude- rubber – this does-

			not mention "- extracted".
Castilla elastica /- Para rubber plant- (两种橡胶树)	of poorer quality (- 质量更差)	Q3 (1)	all made from- the indigenous- Castilla elastica...- Para rubber plant- does not grow in- Mexican region -- no mention of "- quality".
no real interest... until Charles de la Condamine (直到- 拉孔达明才产生兴趣-)	inspired real interest (激发真正- 兴趣)	Q4 (2)	no real interest in- rubber was shown- by any European- until Charles de- la Condamine- , a French- mathematician -- this matches "- inspired real- interest".
became pliant- when warm and- rigid when cold (- 遇热软、遇冷硬)	turn either soft or...- (变柔软或……)	Q9 (4)	They also became- pliant when warm- and rigid when- cold – "pliant" = "- soft", so the answer- is "rigid".
employed in the- steam engines (用- 于蒸汽机)	used in the creation- of the... industry (- 用于……产业)	Q11 (5)	It... being- employed in the- steam engines- found in factories- , mills, mines and- railways – this- matches "used in- the creation of- the steam engines- industry".
		Q12 (6)	

produced the first-pneumatic tyre (-发明首个充气轮胎)	the... was developed (.....被-研发)		John Boyd Dunlop-produced the first-pneumatic tyre -- this matches "- the pneumatic tyre-was developed".
mass production-of cars (汽车大规模生产)	the... of the motor-car began (汽车的-.....开始)	Q13 (6)	with the mass-production of cars-just over the-horizon – this-matches "the mass-production of the-motor car began".
import levels... irrepressible rise (进口量势不可-挡增长)	imports... fell (进-口量下降)	Q6 (6)	The import levels-of rubber over-the nineteenth-century bear-witness to its-irrepressible rise -- this contradicts "- imports fell".

说明

- 1. 上述内容可直接复制至Word文档，通过“字体颜色”功能将标注为红色加粗的证据句/答案句设置为红色加粗，格式清晰适配备考需求；
- 2. 高频词汇聚焦“橡胶行业术语（vulcanisation, pneumatic tyre）”和“核心动作词（coagulate, stabilise）”，同义替换精准对应题目考点，帮助考生强化“题干-原文”的细节匹配思维，提升雅思阅读解题效率。

(豆包AI生成)
