

和豆包的对话_0826

用户：

- 帮我生成word：完整原文（证据句红色加粗 + Q号标注）梳理原文逻辑，在每段后面加上翻译和出题人底层逻辑
- 逐题解析版（完整题干 + 答案红色加粗 + 中文解析 + English Explanation）都不能省略字，一题一答案加详细解析
- 高频词汇 + 同义替换单独列出来，原文不能省略，必须高亮答案句，解析中英文相结合，尽量详细一点。

豆包：

What makes a musical expert? 雅思阅读备考资料

一、完整原文（证据句红色加粗 + Q号标注） + 段落翻译 + 出题人底层逻辑

Paragraph 1

What makes a musical expert? How does someone become expert in music? And is it really possible to have a talent for music?

Does that class of people acknowledged to be musical experts just have more of the same basic skills we are all endowed with, or do they have a set of abilities - or neural structures - that are totally different from those of the rest of us? Are high levels of musical achievement simply the result of training and practice, or are they based on **innate brain structure - what we refer to as talent** (Q27)? Talent can be defined as something that originates in genetic structures and that is identifiable by trained people who can recognize its existence before a person has achieved exceptional levels of performance. The emphasis on early identification means that to investigate it, we study the development of skills in children.

段落翻译

是什么造就了音乐专家？一个人如何在音乐领域成为专家？人真的可能拥有音乐天赋吗？

那些被公认为音乐专家的人，是否只是比我们普通人拥有更多相同的基本技能？还是他们拥有一套与我们截然不同的能力（或神经结构）？高水平的音乐成就仅仅是训练和练习的结果，还是基于**先天的-大脑结构——即我们所说的天赋**？天赋可定义为源于基因结构的特质，有经验的人能在一个人取得卓越成就前就识别出它的存在。对“早期识别”的重视意味着，要研究天赋，我们需观察儿童的技能发展过程。

出题人底层逻辑

1. 核心考点（Q27，选择题）：通过“talent = innate brain structure”（天赋即先天大脑结构）明确“有天赋的音乐家”的核心特征，直接为Q27（选“大脑结构与他人不同”）铺垫；
2. 以“三连问引发兴趣→两大核心争议（技能量vs神经结构/练习vs天赋）→天赋科学定义”展开，用“or”强化对立观点，避免单一视角；
3. 用“early identification”“study children”锚定研究方向，为后文“儿童技能差异”“大脑发育-研究”埋下逻辑伏笔，避免开篇抽象。

Paragraph 2

It is evident that some children acquire skills more rapidly than others: the age of onset for walking and talking varies widely, even between children in the same household. There may be genetic factors at work, but these are closely linked with other factors - with a presumably environmental component - such as motivation and family dynamics. Similar factors can influence musical development and can mask the contribution of genetics to musical ability.

段落翻译

显然，有些儿童掌握技能的速度比其他儿童快：即使在同一家庭，儿童开始走路和说话的年龄也差异显著。这可能涉及基因因素，但基因与其他因素（推测为环境因素）紧密相关，如动机和家庭动态。类似因素也会影响音乐发展，并可能掩盖基因对音乐能力的作用。

出题人底层逻辑

1. 过渡段，无直接对应题目，核心功能是“衔接与铺垫”；
- 2.

以“普遍技能差异（走路、说话）→ 基因+环境因素→ 音乐发展启示”展开，用“similar factors” - 建立“一般技能”与“音乐技能”的关联，避免话题跳跃；

3. 用“mask the contribution of genetics”暗示“基因作用难以单独识别”，为后文“练习主导论” - 提供合理性，削弱“天赋唯一论”的预设。

Paragraph 3

Brain studies, so far, haven't been of much use in sorting out the issues. Gottfried Schlaug at Harvard collected brain scans of individuals with absolute pitch* (AP) and showed that a region in the brain called the planum temporale is larger in these people than in others. This suggests that the planum is involved in AP, but **it's not clear if it starts out larger in people who eventually acquire AP, or if the acquisition of AP makes the planum increase in size** (Q28).

*individuals with absolute pitch: people who can identify or sing any musical note correctly without help

段落翻译

迄今为止，大脑研究在解决这些问题上作用有限。哈佛大学的戈特弗里德·施劳格（Gottfried Schlaug）收集了绝对音感（AP）者的脑部扫描图像，发现他们大脑中一个名为“颞平面”（planum-temporale）的区域比其他人更大。这表明颞平面与绝对音感有关，但**目前尚不清楚：是最终获得绝对音感的人天生颞平面就更大，还是获得绝对音感的过程让颞平面变大。**

（注：绝对音感者指无需辅助就能准确识别或唱出任何音符的人）

出题人底层逻辑

1. 核心考点（Q28，选择题）：通过“it's not clear if...or...”明确“大脑特征与音乐技能的因果关系-未知”，直接对应Q28选项C（大脑特征是原因还是结果）；
2. 以“大脑研究局限性→ 具体研究（施劳格+绝对音感）→ 因果难题”展开，用“but”强化转折，突出研究的未解决问题；
3. 用“planum temporale”等专业术语增强科学性，同时通过“not clear”引导考生关注“研究争议点”，而非单纯记忆结论，符合雅思阅读“细节推理”的考查倾向。

Paragraph 4

Results of research into the areas of the brain involved in skilled motor movement are more-conclusive. **Studies of violin players have shown that the region of the brain responsible for-controlling the movement of the left hand (the hand that requires greater precision in violin-playing) increases in size as a result of practice** (Q29). We do not know yet if the propensity for-increase pre-exists in some people and not others.

段落翻译

针对“熟练运动控制相关大脑区域”的研究结果更具确定性。**对小提琴家的研究表明，大脑中负责控制左手（小提琴演奏中需更高精度的手）运动的区域，会因练习而变大。**目前尚不清楚这种“变大倾向”是否在某些人身上先天存在，而在另一些人身上不存在。

出题人底层逻辑

1. 核心考点（Q29，选择题）：通过“increases in size as a result of practice”明确“练习导致大脑变化”，直接对应Q29选项A（练习后大脑可能变化）；
2. 以“研究结论确定性对比→小提琴家研究细节→残留疑问”展开，用“more conclusive”与上段“-haven't been of much use”形成对比，突出该研究的价值；
3. 用“left hand (greater precision)”具体说明“熟练运动控制”，让抽象研究具象化，同时通过“-do not know yet”保留科学严谨性，避免绝对化表述。

Paragraph 5

The evidence against talent comes from research on how much training the experts do. Like-experts in mathematics, chess, or sports, experts in music require lengthy periods of instruction-and practice. In several studies, the very best music students were found to have practised-more than twice as much as the others. In another study, students were secretly divided into-two groups based on teachers' perceptions of their talent. Several years later, **it was found-that the students who achieved the highest performance ratings had practised the most,-irrespective of which talent group they had been assigned to, suggesting that practice does-not merely correlate with achievement, but causes it** (Q30).

段落翻译

反驳“天赋论”的证据来自对专家训练量的研究。与数学、国际象棋或体育领域的专家一样，音乐专家也需要长期的指导和练习。多项研究发现，最优秀的音乐专业学生的练习时间是其他人的两倍多。-在另一项研究中，研究人员根据教师对学生“天赋”的判断，秘密将学生分为两组。几年后发现，无-

论被分到哪个天赋组，表现评分最高的学生都是练习时间最长的——这表明练习不仅与成就相关，更是成就的原因。

出题人底层逻辑

1. 核心考点（Q30，选择题）：通过“irrespective of talent group...practised the most”明确“练习比天赋更重要”，直接对应Q30选项A（天赋与专业能力关系不大）；
2. 以“反驳天赋论→跨领域共性→具体实验（两组对比）→因果结论”展开，用“suggesting”引导实验结论，强化逻辑链条；
3. 用“secretly divided”“several years later”等细节增强实验可信度，同时通过“correlate with vs-causes”引导考生区分“相关”与“因果”，符合雅思阅读“逻辑关系识别”的考查重点。

Paragraph 6

Anders Ericsson, at Florida State University, approaches the topic of musical expertise as a general problem in cognitive psychology. He takes as a starting point the assumption that there are certain issues involved in becoming an expert at anything; that we can learn about musical expertise by studying expert chess players, athletes, artists, mathematicians, as well as the musicians themselves. **The emerging picture from such studies is that ten thousand hours of practice is required to achieve the level of mastery associated with being a world-class expert - in anything** (Q32, Q34, Q35). In study after study, of composers, ice-skaters, concert-pianists, chess players and master criminals, this number comes up again and again. Someone would do this amount of practice if they practised, for example, roughly 20 hours a week for ten-years. Of course, this does not address why some people do not seem to get anywhere when they practise, and why some people get more out of their practice sessions than others. **But no-one has yet found a case in which true world-class expertise was accomplished in less time** (Q3-5). It seems that it takes the brain this long to assimilate all that it needs to know to achieve true-mastery.

段落翻译

佛罗里达州立大学的安德斯·埃里克森（Anders

Ericsson）将“音乐专长”视为认知心理学的普遍问题来研究。他的研究起点是：无论在任何领域成为专家，都涉及某些共同问题；我们可通过研究国际象棋大师、运动员、艺术家、数学家以及音乐家，来理解音乐专长。**这些研究得出的一致结论是：要达到世界级专家的精通水平——无论在任何领域——都需要一万小时的练习。**对作曲家、滑冰运动员、音乐会钢琴家、国际象棋选手乃至顶尖罪犯的多项研究中，这个数字反复出现。例如，若每周练习约20小时，持续十年，就能达到这个练习量。当然，这无法解释为何有些人练习后毫无进展，为何有些人从练习中收获更多。**但目前尚未发现任何案-**

例表明，真正的世界级专长能在少于一万小时的练习中实现。似乎大脑需要这么长时间才能吸收所有-必要知识，实现真正的精通。

出题人底层逻辑

1. 多考点集中段（Q32、Q34、Q35，判断题）：

- Q32：通过 “ten thousand hours...in anything” 体现 “不同领域专长的共性”，对应 “YES” ；
- Q34：通过 “this does not address why some people do not get anywhere” 否定 “只要练习够-久就能成专家”，对应 “NO” ；
- Q35：通过 “no-one has yet found a case...in less time” 否定 “少于一万小时成专家”，对应 “-NO” ；

2. 以 “专家研究视角→跨领域共性（一万小时）→具体量化→残留疑问→结论强化” 展开，用 “in-anything” “again and again” 强调共性，用 “but” 强化 “一万小时是必要条件” ；

3. 用 “master criminals” 扩展领域范围，避免 “正向领域” 的局限，同时通过 “20 hours a week for-ten years” 将抽象数字具象化，帮助考生理解，符合雅思 “细节量化” 的考查特点。

Paragraph 7

The ten-thousand-hour theory is consistent with what we know about how the brain learns- (Q36). Learning requires the assimilation and consolidation of information in neural tissue. The more experiences we have with something, the stronger the memory/learning trace for that-experience becomes. Although people differ in how long it takes them to consolidate information-neurally, **it remains true that increased practice leads to a greater number of neural traces,-which create stronger memory representation** (Q36).

段落翻译

一万小时理论与我们对大脑学习机制的认知一致。学习需要在神经组织中吸收和巩固信息。我们对某-事物的经验越多，该经验的记忆/学习痕迹就越强。尽管人们在神经层面巩固信息的速度不同，但**练习-量增加会产生更多神经痕迹，进而形成更强的记忆表征——这一点是确定的。**

出题人底层逻辑

1. 核心考点（Q36，判断题）：通过 “consistent with what we know” “increased practice leads to-more neural traces” 明确 “现有学习认知支持练习重要性”，对应 “YES” ；

2.

以“理论与大脑机制一致→学习的神经基础→个体差异与普遍规律”展开，用“consistent with” - 建立“一万小时理论”与“科学常识”的关联，增强说服力；

3. 用“neural tissue” “memory trace”等术语解释“练习起效的科学原理”，从“现象描述”深入到“本质解释”，提升文本深度，同时引导考生关注“理论背后的科学依据”。

Paragraph 8

The classic rebuttal to this theory goes something like this: What about Mozart? I hear that he composed his first symphony at the age of four! First, there is a factual error here: **Mozart did not write it until he was eight** (Q38). Still, this is unusual, to say the least. However, **this early work received little acclaim and was not performed very often** (Q39). In fact, the only reason we know about it is because the child who wrote it grew up to become Mozart. And **Mozart had an expert teacher in his father, who was renowned as a teacher of musicians all over Europe** (Q37). We do not know how much Mozart practised, but if he started at age two and worked thirty-two hours a week (quite possible, given that his father was a stern taskmaster) he would have made his ten thousand hours by the time he composed his first symphony. **This does not mean that there are no genetic factors involved in Mozart's greatness, but that inborn traits may not be the only cause** (Q40).

段落翻译

对该理论的经典反驳是：莫扎特呢？我听说他四岁就创作了第一首交响曲！首先，这里有个事实错误：**莫扎特直到八岁才写下这首曲子**。尽管如此，至少可以说这仍属罕见。然而，**这部早期作品几乎没有获得认可，演出次数也很少**。事实上，我们之所以知道它，只是因为创作它的孩子后来成了莫扎特。而且，**莫扎特的父亲是他的专业老师——其父亲是全欧洲知名的音乐教师**。我们不知道莫扎特具体练习了多久，但如果他从两岁开始，每周练习32小时（考虑到他父亲是个严厉的监督者，这很可能），那么到他创作第一首交响曲时，练习时间就已达一万小时。**这并不意味着莫扎特的伟大与基因因素无关，而是表明先天特质可能并非唯一原因**。

出题人底层逻辑

1. 多考点集中段（Q37、Q38、Q39、Q40，摘要填空）：

- Q37：通过“had an expert teacher in his father”对应“tuition（指导）”；
- Q38：通过“did not write it until he was eight”对应“eight”；
- Q39：通过“received little acclaim, not performed often”对应“popular（不受欢迎）”；
- Q40：通过“inborn traits may not be the only cause”对应“inherited（遗传的）”；

2.

以“反驳→事实纠错→作品局限性→外部条件（父亲指导）→练习量推算→结论（先天非唯一）” - 展开，用“however” “but” 层层转折，回应反驳并强化理论；

3. 用“stern taskmaster” “thirty-two hours a week” 等细节增强“莫扎特也符合一万小时”的说服力，同时通过“not the only cause” 保持科学严谨，避免否定基因的作用，符合雅思“客观论证” - 的风格。

二、逐题解析版（完整题干 + 答案红色加粗 + 中文解析 + English Explanation）

Questions 27–30（选择题）

题干共性说明

Choose the correct letter, A, B, C or D. Write the correct letter in boxes 27–30 on your answer sheet.

27. In the first paragraph, the writer suggests that a talented-musician is someone

- **完整题干：**在第一段中，作者认为有天赋的音乐家是_____
- **答案：** B
- **中文解析：**根据Paragraph 1，作者明确将“天赋（talent）”定义为“源于先天大脑结构（innate brain structure）”，即有天赋的音乐家的大脑结构与普通人不同。选项A（意识到自己与他人不同）未提及“自我认知”；C（童年表现极佳）是“天赋的早期识别方式”，而非“天赋音乐家的定义”；D（核心技能比普通人更多样）与原文“more of the same basic skills”（更多相同基本技能）矛盾，故答案为B。
- **English Explanation：** The writer defines "talent" as "innate brain structure" in Paragraph 1, meaning a talented musician has a different brain structure (B). A (self-awareness) is unstated, C (early childhood performance) is how talent is identified (not the definition), D (more varied-skills) contradicts "more of the same basic skills". So the answer is B.

28. According to the writer, what is unclear about the findings of Gottfried Schlaug?

- **完整题干：**根据作者，戈特弗里德·施劳格的研究发现中，哪一点尚不明确？
- **答案：**C
- **中文解析：**根据Paragraph 3，施劳格发现“绝对音感者的颞平面更大”，但“不清楚颞平面天生更大还是因绝对音感变大（it's not clear if it starts out larger...or if AP makes it increase）”，即“大脑特征是音乐技能的原因还是结果”。选项A（大脑哪个区域与技能相关）已明确是“颞平面”；B（哪种技能导致大脑最大变化）未提及“技能类型对比”；D（有些人学技能是否更容易）未涉及“学习难度”，故答案为C。
- **English Explanation：**Schlaug's study shows a larger planum temporale in AP holders, but it's unclear if this is a cause (born larger) or effect (AP makes it larger) (C). A (which brain part links to skill) is clear, B (which skill causes biggest change) is unstated, D (ease of learning) is unmentioned. So the answer is C.

29. According to the writer, what has been established by studies of violin players?

- **完整题干：**根据作者，对小提琴家的研究确立了哪一点？
- **答案：**A
- **中文解析：**根据Paragraph 4，小提琴家的研究表明“控制左手运动的大脑区域因练习变大（the region...increases in size as a result of practice）”，即“练习后大脑可能发生变化”。选项B（左撇子小提琴家大脑结构不同）未提及“左撇子”；C（手的大小由基因决定）未讨论“手的大小”；D（小提琴家天生有特定大脑结构）与“因练习变大”矛盾，故答案为A。
- **English Explanation：**Studies of violinists confirm "the brain region controlling the left hand increases in size due to practice" (A). B (left-handed violinists) is unstated, C (hand size from genetics) is unmentioned, D (born with specific brain structure) contradicts "as a result of practice". So the answer is A.

30. According to the writer, findings on the amount of practice done by expert musicians suggest that

- **完整题干：**根据作者，关于音乐专家练习量的研究发现表明_____
- **答案：**A
- **中文解析：**根据Paragraph 5，研究发现“表现最好的学生练习时间最长，与天赋分组无关（highest performance...practised the most, irrespective of talent group）”，即“天赋与专业能力关系不大”。选项B（练习阻碍天赋发展）未提及“阻碍”；C（教-

师无法识别天赋)是“秘密分组”的实验设计,而非结论;D(专业能力与教学质量相关)未提及“-教学质量”,故答案为A。

- **English Explanation:** Findings show "performance correlates with practice, not talent group-" (A). B (practice prevents talent) is unstated, C (teachers can't recognize talent) is not the conclusion, D (expertise links to teaching quality) is unmentioned. So the answer is A.

Questions 31–36 (判断题)

题干共性说明

Do the following statements agree with the claims of the writer in Reading Passage 3? In boxes 31–36 on your answer sheet, write YES if the statement agrees with the claims of the writer NO if the statement contradicts the claims of the writer NOT GIVEN if it is impossible to say what the writer thinks about this

31. Anders Ericsson's work with cognitive psychology has influenced other researchers.

- **完整题干:** 安德斯·埃里克森在认知心理学领域的研究影响了其他研究者。
- **答案:** NOT GIVEN
- **中文解析:** 原文Paragraph 6仅描述埃里克森的研究视角(将音乐专长视为认知心理学普遍问题)和结论(一万小时理论),未提及“他的研究影响了其他研究者”,既无肯定也无否定,故为NOT GIVEN。
- **English Explanation:** The passage describes Ericsson's work but provides no information about "influencing other researchers". There is no basis for the statement, so the answer is NOT-GIVEN.

32. Different areas of expertise seem to have one specific thing in common.

- **完整题干:** 不同领域的专长似乎有一个特定的共同点。
- **答案:** YES
- **中文解析:** 根据Paragraph 6,埃里克森的研究发现“无论任何领域,成为世界级专家都需要一万小时练习(ten thousand hours of practice...in anything)”,即“不同领域的共同点是‘需一万小时练习’”,与题干一致,故为YES。

- **English Explanation:** Ericsson's studies show "ten thousand hours of practice is required for world-class expertise in any field", meaning different areas share this common point (YES). So the answer is YES.

33. In order to be useful, practice must be carried out regularly every day.

- **完整题干:** 要让练习有效, 必须每天规律进行。
- **答案:** NOT GIVEN
- **中文解析:** 原文Paragraph 6仅提及“每周20小时, 持续十年”的练习量, 未规定“必须每天进行”; “regularly” (规律) 不等于“every day” (每天), 且作者未讨论“练习频率与有效性的关系”, 故为NOT GIVEN。
- **English Explanation:** The passage mentions "20 hours a week for ten years" but not "practice must be daily". No information links "daily practice" to "usefulness", so the answer is NOT GIVEN.

34. Anyone who practises for long enough can reach the level of a world-class expert.

- **完整题干:** 只要练习时间足够长, 任何人都能达到世界级专家水平。
- **答案:** NO
- **中文解析:** 根据Paragraph 6, 作者明确指出“该理论无法解释为何有些人练习后毫无进展 (why some people do not seem to get anywhere when they practise)”, 即“仅靠长时间练习不足以让所有人成为专家”, 与题干“anyone”矛盾, 故为NO。
- **English Explanation:** The writer notes "some people do not get anywhere despite practice", contradicting "anyone who practises long enough can be a world-class expert" (NO). So the answer is NO.

35. Occasionally, someone can become an expert at a global level with fewer than 10,000 hours' practice.

- **完整题干:** 偶尔有人能以少于一万小时的练习成为全球级专家。
- **答案:** NO
- **中文解析:** 根据Paragraph 6, “目前尚未发现任何案例表明, 真正的世界级专长能在少于一万小时的练习中实现 (no-one has yet found a case...in less time)”, 直接否定“偶尔有例外”, 与题干矛盾, 故为NO。

- **English Explanation:** The writer states "no case of world-class expertise with less than 10,000-hours has been found", contradicting "occasionally someone can" (NO). So the answer is NO.

36. Existing knowledge of learning and cognitive skills supports the importance of practice.

- **完整题干:** 现有的学习和认知技能知识支持练习的重要性。
- **答案:** YES
- **中文解析:** 根据Paragraph 7, “一万小时理论与大脑学习机制的认知一致 (consistent with what-we know about how the brain learns)”, 且 “练习增加神经痕迹, 强化记忆 (increased practice-leads to more neural traces)”, 即现有认知支持 “练习重要性”, 与题干一致, 故为YES。
- **English Explanation:** The ten-thousand-hour theory aligns with brain learning mechanisms ("more practice = stronger neural traces"), so existing knowledge supports practice's importance (YES). So the answer is YES.

Questions 37–40 (摘要填空)

题干共性说明

Complete the summary using the list of words, A-J, below. Write the correct letter, A-J, in boxes 3-7-40 on your answer sheet.

List of Words A popular B artistic C completed D eight E tuition F encouragement G inherited H-four I practice J two

37. However, the writer points out that the young Mozart received-a lot of _____ from his father

- **完整题干:** 然而, 作者指出, 年少的莫扎特从父亲那里得到了大量的_____
- **答案:** E
- **中文解析:** 根据Paragraph 8, “莫扎特的父亲是他的专业老师 (had an expert teacher in-his father)”, “老师提供的是指导 (tuition)”。选项A (受欢迎的)、B (艺术的) 等均与 “父亲的角色” 无关, 故答案为E。
- **English Explanation:** Mozart's father was his "expert teacher", so he received "tuition" (-guidance) from his father (E). Other options (popular, artistic) are irrelevant. So the answer is E.

38. and that the symphony he wrote at the age of _____

- **完整题干：** 以及他在_____岁时创作的交响曲
- **答案：** D
- **中文解析：** 根据Paragraph 8, “莫扎特直到八岁才写下第一首交响曲（did not write it until he was-eight）”，直接对应“eight”。选项H（四岁）是原文纠正的错误信息，故答案为D。
- **English Explanation:** The writer corrects the myth: Mozart wrote his first symphony "at eight" (-D), not four (H). So the answer is D.

39. was not _____ and may be of only academic interest.

- **完整题干：** 并不_____，且可能仅具有学术价值。
- **答案：** A
- **中文解析：** 根据Paragraph 8, “这部早期作品几乎没有获得认可，演出次数也很少（received little-acclaim and was not performed often）”，即“不受欢迎（not popular）”。选项B（艺术的）、-C（完成的）等均与“作品的认可度”无关，故答案为A。
- **English Explanation:** The symphony "received little acclaim and few performances", meaning-it was "not popular" (A). Other options (artistic, completed) are irrelevant. So the answer is A.

40. The case therefore supports the view that expertise is not solely-the result of _____ characteristics.

- **完整题干：** 因此，该案例支持“专长并非仅由_____特质导致”的观点。
- **答案：** G
- **中文解析：** 根据Paragraph 8, “先天特质可能并非唯一原因（inborn traits may not be the only-cause）”，“inborn traits”（先天特质）即“inherited characteristics”（遗传特质）。选项I（-练习）是“非遗传因素”，故答案为G。
- **English Explanation:** The case shows "inborn traits are not the only cause of expertise", so-expertise is not solely from "inherited" characteristics (G). I (practice) is the other factor. So the answer is G.

三、高频词汇 + 同义替换

(一) 高频词汇（词性 + 中文释义 + 原文出处 + 高亮答案句）

词汇（Word）	词性（Part of-Speech）	中文释义（-Chinese Definition）	原文出处（-Source Paragraph）	高亮答案句（-Highlighted Answer Sentence）
innate	adj.	先天的；天生的	1	are they-based on- innate brain-structure -- what we refer-to as talent?
neural	adj.	神经的	1/7	do they have a set of abilities - or neural structures / the assimilation of information in neural tissue.
absolute pitch	n. phr.	绝对音感（无需-辅助识别音符）	3	Gottfried Schlaug... collected brain scans of individuals with *absolute pitch (AP)**.
planum temporale	n. phr.	颞平面（大脑负责听觉的区域）	3	a region in the-brain called-the planum-temporale is-larger in these-people.
skilled motor-movement	n. phr.	熟练运动控制	4	Results of research into the areas of the

				brain involved in skilled motor movement are more conclusive.
cognitive psychology	n. phr.	认知心理学	6	Anders Ericsson... approaches the topic as a general problem in cognitive psychology .
assimilate	v.	吸收；理解	6/7	it takes the brain this long to assimilate all that it needs to know / Learning requires the assimilation of information.
neural trace	n. phr.	神经痕迹（大脑-储存记忆的形式-）	7	increased practice leads to a greater number of neural traces .
acclaim	n.	赞扬；认可	8	this early-work received-little acclaim -and was-not performed-very often.
inborn	adj.	先天的；天生的	8	but that- inborn traits-

				may not be the only cause.
--	--	--	--	----------------------------

(二) 同义替换 (原文词 + 替换词 + 对应题目/出处 + 高亮对应句)

原文词 (Original Word)	同义替换 (- Synonym)	对应题目/出处 (- Relevant Question/Source)	高亮对应句 (- Highlighted Matching Sentence)
innate brain structure (先天大脑-结构)	brain structure-unlike that of-other people (与他人不同的大脑结构)	Q27 (1)	are they based-on innate brain-structure - what-we refer to as-talent – matches-Option B.
not clear if...or... (不清楚是……还是……)	whether a feature-is a cause or-an effect (特征是原因还是结果)	Q28 (3)	it’ s not clear-if it starts out-larger...or if the-acquisition of AP-makes the planum-increase in size -- matches Option C.
increases in size as-a result of practice-(因练习变大)	changes may occur in the brain following practice (练习后大脑可能变化)	Q29 (4)	the region...-increases in size-as a result of-practice – matches-Option A.
practised the most, irrespective of talent group (练习最多, -与天赋组无关)	talent may have little to do with expertise (天赋与专业能力关系不大)	Q30 (5)	the students-who achieved-the highest...-had practised the-most, irrespective-of which talent-group – matches-Option A.
		Q32 (6)	

ten thousand hours of practice in anything (任何领域-需一万小时练习)	different areas-of expertise-have one thing-in common (不同-领域专长有共同点)		ten thousand-hours of practice-is required to-achieve mastery-- in anything -- matches "YES".
no-one has found-a case in-less time (无少于-一万小时的案例)	occasionally someone can with fewer hours (偶尔有人少-于一万小时)	Q35 (6)	no-one has yet-found a case in-which true world-class expertise-was accomplished-in less time -- contradicts "YES".
consistent with-what we know-about how the-brain learns (与大-脑学习机制一致)	existing knowledge supports the importance of practice (现有知识-支持练习重要性)	Q36 (7)	The ten-thousand-hour theory is-consistent with-what we know-about how the-brain learns -- matches "YES".
had an expert-teacher in-his father (父亲是-专业老师)	received a lot-of tuition (得到大-量指导)	Q37 (8)	Mozart had an-expert teacher in-his father -- matches Option E.
did not write it until-he was eight (八岁-才创作)	at the age of eight-(八岁时)	Q38 (8)	Mozart did not-write it until-he was eight -- matches Option D.
received little-acclaim, not-performed often (-少认可、少演出)	was not popular (-不受欢迎)	Q39 (8)	this early work-received little-acclaim and was-not performed-very often -- matches Option A.
inborn traits (先天-特质)	inherited characteristics (遗-传特质)	Q40 (8)	but that inborn-traits may not be-

			the only cause -- matches Option G.
